### Our model objectives:

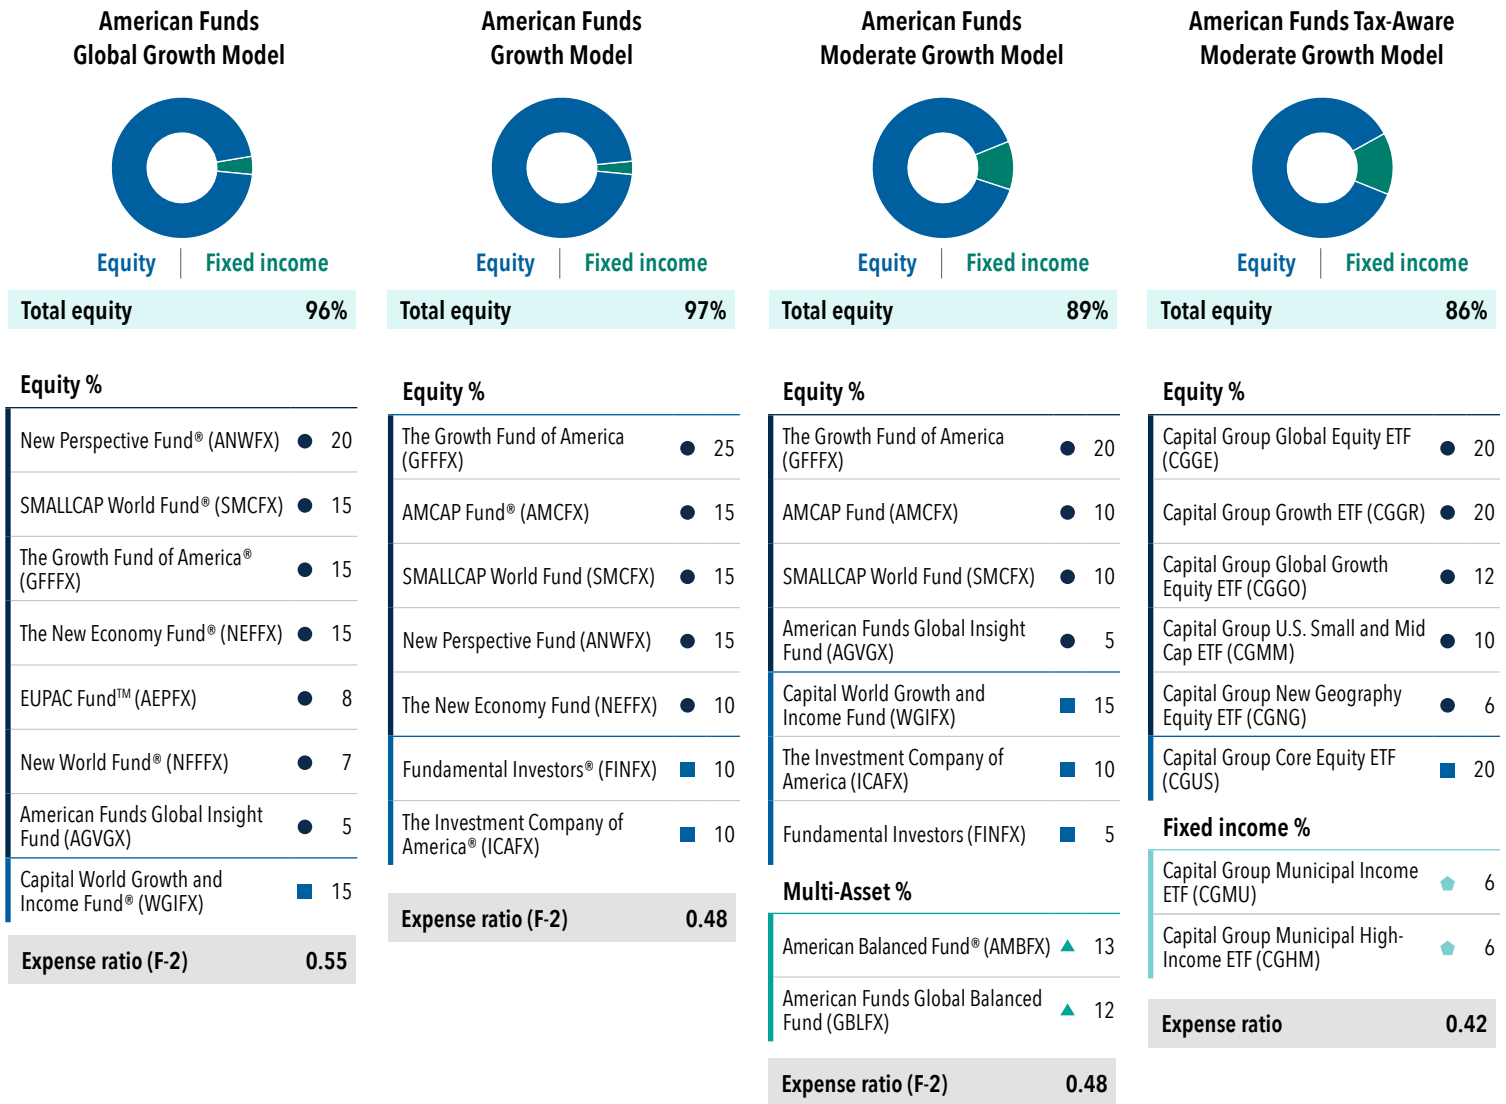

Growth  
Growth and income  
Income  
Preservation and income

**Investments are not FDIC-insured, nor are they deposits of or guaranteed by a bank or any other entity, so they may lose value.**

Advisory services offered through Capital Research and Management Company (CRMC) and its RIA affiliates.

## Growth

As of November 30, 2025

Asset mix percentages are based on a look through to the holdings of the underlying funds as of date shown.

● Growth ■ Growth and income ◆ Equity income ▲ Balanced ◆ Tax-Exempt □ Taxable

Expense ratio for each model is the weighted average of the underlying mutual funds' and/or exchange-traded funds' gross expense ratios as of its most recent prospectus. Expense ratios do not reflect any advisory fee charged by model providers. Underlying mutual funds are based on Class F-2 shares.

# At Capital Group, home of American Funds, we have decades of experience working with advisors and their clients

## Active investing

The flexible approach found in American Funds mutual funds and Capital Group exchange-traded funds (ETFs) seeks to capitalize on markets in constant motion to deliver above-average, risk-adjusted results over the long term.

## Excess return potential

When applicable and aligned with the funds' objectives, American Funds mutual funds and Capital Group ETFs seek to provide higher returns than their benchmarks, at lower risk.

## Track record

Capital Group has been helping investors pursue better outcomes for more than 90 years. We have the size, stability and long history that investors look for in their investment management professionals.

## Metrics that matter

Each portfolio's success in achieving the desired investor goal is defined by its ability to deliver a specific mix of quantitative investment metrics such as risk-adjusted returns, maximum drawdown and yield.

## Our two-layer system

Capital Group employs two layers of active management for our models. The first layer is bottom-up security selection by portfolio managers in each of the underlying funds.

The second layer is the construction and oversight of the model portfolios by the Portfolio Solutions Committee, with support from the Capital Solutions Group.

model portfolios.

All Capital Group trademarks mentioned are owned by The Capital Group Companies, Inc., an affiliated company or fund. All other company and product names mentioned are the property of their respective companies.

Model portfolios are subject to the risks associated with the underlying funds in the model portfolio. Investors should carefully consider investment objectives, risks, fees and expenses of the funds in the model portfolio, which are contained in the fund prospectuses. Investing outside the United States involves risks, such as currency fluctuations, periods of illiquidity and price volatility. These risks may be heightened in connection with investments in developing countries. Smaller company stocks entail additional risks, and they can fluctuate in price more than larger company stocks. The return of principal for bond funds and for funds with significant underlying bond holdings is not guaranteed. Fund shares are subject to the same interest rate, inflation and credit risks associated with the underlying bond holdings. Lower rated bonds are subject to greater fluctuations in value and risk of loss of income and principal than higher rated bonds. Investments in mortgage-related securities involve additional risks, such as prepayment risk. The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds. A nondiversified fund has the ability to invest a larger percentage of assets in the securities of a smaller number of issuers than a diversified fund. As a result, poor results by a single issuer could adversely affect fund results more than if the fund were invested in a larger number of issuers. See the applicable prospectus for details.

Model portfolios are provided to financial intermediaries who may or may not recommend them to clients. The portfolios consist of an allocation of funds for investors to consider and are not intended to be investment recommendations. The portfolios are asset allocations designed for individuals with different time horizons, investment objectives and risk profiles. Allocations may change and may not achieve investment objectives. If a cash allocation is not reflected in a model, the intermediary may choose to add one. Capital Group does not have investment discretion or authority over investment allocations in client accounts. Rebalancing approaches may differ depending on where the account is held. Investors should talk to their financial professional for information on other investment alternatives that may be available. In making investment decisions, investors should consider their other assets, income and investments. Visit [capitalgroup.com](https://capitalgroup.com) for current allocations.
