

Capital Group
Ultra Short Income ETF

Summary prospectus
March 1, 2026

Ticker: CGUI
Exchange: NYSE Arca, Inc.

Before you invest, you may want to review the fund's [prospectus](#) and [statement of additional information](#), which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at capitalgroup.com/prospectus/etf. You can also get this information at no cost by calling (800) 421-4225 or by sending an email request to prospectus@capitalgroup.com. The current prospectus and statement of additional information, dated March 1, 2026, are incorporated by reference into this summary prospectus.

Capital Group Ultra Short Income ETF

Investment objective The fund's investment objective is to provide current income, consistent with an ultra-short duration profile, focused on preservation of capital.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example below.**

Shareholder fees (fees paid directly from your investment)	
None	
Annual fund operating expenses* (expenses that you pay each year as a percentage of the net asset value of your investment)	
Management fees	0.18%
Other expenses	0.00
Total annual fund operating expenses	0.18

* The fund's Investment Advisory and Service Agreement provides that the investment adviser will pay all operating expenses of the fund, except for the management fees, interest expenses, taxes, acquired fund fees and expenses, costs of holding shareholder meetings, legal fees and expenses relating to arbitration or litigation, payments under the fund's 12b-1 plan (if any) and other non-routine or extraordinary expenses. Additionally, the fund will be responsible for its non-operating expenses, including brokerage commissions and fees and expenses associated with the fund's securities lending program, if any.

Example This example is intended to help you compare the cost of investing in the fund with the cost of investing in other funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then sell all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. No fees are charged by the fund upon the sale of fund shares, so you would incur these hypothetical costs whether or not you were to sell your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
	\$18	\$58	\$101	\$230

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 90% of the average value of its portfolio.

Principal investment strategies The fund will invest at least 80% of its assets in bonds and other debt securities that accrue income, which may be represented by derivatives. Under normal circumstances, the fund will invest primarily in investment grade, U.S. dollar denominated short-term debt, including: high-quality, short-term money market instruments such as commercial paper and certificates of deposit; U.S. Treasury securities and other government securities guaranteed or issued by an agency or instrumentality of the U.S. government; corporate securities; and asset-backed securities. The fund may invest substantially in debt securities that are tied economically to countries outside the United States, including securities issued by foreign corporations or foreign governments and their agencies and instrumentalities.

The fund will invest primarily in investment-grade debt with a minimum short-term rating of P-2, A-2 or F2 or better, or a minimum long-term rating of BBB- or Baa3, in each case given by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser.

The fund may also invest in futures contracts and swaps, which are types of derivatives. A derivative is a financial contract, the value of which is based on the value of an underlying financial asset (such as a stock, bond or currency), a reference rate or a market index.

The fund seeks to maintain an average portfolio duration of one year or less. However, under certain market conditions, such as in periods of significant volatility in interest rates and spreads, the fund's duration may be longer than one year. In addition, under normal market conditions, the fund seeks to maintain a dollar-weighted average effective maturity of two years or less.

The fund is nondiversified, which means it may invest a greater portion of its assets in fewer issuers than would otherwise be the case. In addition, under normal market conditions, the fund will invest more than 25% of its assets in securities issued by companies in the financials group of industries. However, the fund may invest 25% of its assets or less in such industries as a temporary defensive measure.

The fund's assets are managed by a team of portfolio managers. Under this approach, the fund's managers work together to oversee the fund's entire portfolio. For more information regarding the investment process of the fund, see the "Management and organization" section of this prospectus.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively priced securities that, in its opinion, represent good investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time.

Market conditions – The prices of, and the income generated by, the securities held by the fund may decline due to various factors, including events or conditions affecting the general economy or particular industries or companies; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; levels of public debt and deficits; changes in inflation rates; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Events (including public health emergencies, such as the spread of infectious disease), bank failures and other circumstances in one country or region could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in the issuer's financial condition or credit rating, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives and the market response to any such initiatives. An individual security may also be affected by factors relating to the industry or sector of the issuer or the securities markets as a whole, and conversely an industry or sector or the securities markets may be affected by a change in financial condition or other event affecting a single issuer.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by factors such as the interest rates, maturities and credit quality of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. Also, when interest rates rise, issuers of callable debt securities that may be prepaid at any time, such as mortgage- or other asset-backed securities, are less likely to refinance existing debt securities, causing the average life of such securities to extend. A general change in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. Changes in actual or perceived creditworthiness may occur quickly. A downgrade or default affecting any of the fund's securities could cause the net asset value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities.

Investing in cash equivalents – Cash equivalents, such as commercial paper, asset-backed commercial paper, short term-bank obligations and corporate bonds and notes that mature or may be redeemed or mature within thirteen months or less, like other fixed income instruments are subject to interest rate risk. However, the short-term nature of a commercial paper investment makes it less susceptible to volatility than many other fixed income securities because interest rate risk typically increases as maturity lengths increase. Commercial paper is often unsecured, but may be supported by letters of credit or other forms of collateral. Maturing commercial paper are usually repaid by the issuer from the proceeds of new commercial paper issuances. As a result, investment in commercial paper is subject to rollover risk, or the risk that the issuer cannot issue enough new commercial paper to satisfy its outstanding commercial paper. As with all fixed income securities, there is a chance that the issuer will default on its short-term obligations and these securities may become illiquid or suffer from reduced liquidity in these or other situations.

Investing in financials – Under normal circumstances, a significant portion of the fund's portfolio will be comprised of securities issued by companies in the financials group of industries. As a result, the fund may be more susceptible to any economic, business, political or other developments which generally affect this group of industries. The profitability of many types of financial companies may be adversely affected in certain market cycles, including during periods of rising interest rates, which may restrict the availability and increase the cost of capital, and declining economic conditions, which may cause credit losses due to financial difficulties of borrowers. Because many types of financial companies are vulnerable to these economic cycles, the fund's investments may lose value during such periods.

Investing in securities backed by the U.S. government – U.S. government securities are subject to market risk, interest rate risk and credit risk. Securities backed by the U.S. Treasury or the full faith and credit of the U.S. government are guaranteed only as to the timely payment of interest and principal when held to maturity. Accordingly, the current market values for these securities will fluctuate with changes in interest rates and the credit rating of the U.S. government.

Securities issued by U.S. government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government are neither issued nor guaranteed by the U.S. government.

Investing in asset-backed securities – Asset-backed securities include debt obligations that represent interests in pools of income-bearing assets, such as consumer loans or receivables. While such securities are subject to the risks associated with investments in debt instruments generally (for example, credit, extension and interest rate risks), they are also subject to other and different risks. Asset-backed securities are subject to changes in the payment patterns of borrowers of the underlying debt, potentially increasing the volatility of the securities and the fund's net asset value. When interest rates fall, borrowers are more likely to refinance or prepay their debt before its stated maturity. This may result in the fund having to reinvest the proceeds in lower yielding securities, effectively reducing the fund's

income. Conversely, if interest rates rise and borrowers repay their debt more slowly than expected, the time in which the asset-backed securities are paid off could be extended, reducing the fund's cash available for reinvestment in higher yielding securities. Asset-backed securities are also subject to the risk that underlying borrowers will be unable to meet their obligations and the value of property that secures the asset may decline in value and be insufficient, upon foreclosure, to repay the associated loans.

Investing in derivatives – The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and a derivative instrument may cause the fund to lose significantly more than its initial investment. Derivatives may be difficult to value, difficult for the fund to buy or sell at an opportune time or price and difficult, or even impossible, to terminate or otherwise offset. The fund's use of derivatives may result in losses to the fund, and investing in derivatives may reduce the fund's returns and increase the fund's price volatility. The fund's counterparty to a derivative transaction (including, if applicable, the fund's clearing broker, the derivatives exchange or the clearinghouse) may be unable or unwilling to honor its financial obligations in respect of the transaction. In certain cases, the fund may be hindered or delayed in exercising remedies against or closing out derivative instruments with a counterparty, which may result in additional losses. Derivatives are also subject to operational risk (such as documentation issues, settlement issues and systems failures) and legal risk (such as insufficient documentation, insufficient capacity or authority of a counterparty, and issues with the legality or enforceability of a contract).

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile or difficult to determine, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or to try to limit losses, or may be forced to sell at a loss. Depending on market conditions, reduced liquidity of fund holdings may also cause the fund's shares to trade in the market at wider bid-ask spreads or greater premiums or discounts to the fund's NAV.

Investing outside the United States – Securities of issuers domiciled outside the United States or with significant operations or revenues outside the United States and securities tied economically to countries outside the United States may lose value because of adverse political, social, economic or market developments in the countries or regions in which the issuers are domiciled, operate or generate revenue or to which the securities are tied economically. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal, auditing, financial reporting and recordkeeping standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund, which could impact the liquidity of the fund's portfolio.

Interest rate risk – The values and liquidity of the securities held by the fund may be affected by changing interest rates. For example, the values of these securities may decline when interest rates rise and increase when interest rates fall. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities. The fund may invest in variable and floating rate securities. When the fund holds variable or floating rate securities, a decrease in market interest rates will adversely affect the income received from such securities and the net asset value of the fund's shares. Although the values of such securities are generally less sensitive to interest rate changes than those of other debt securities, the value of variable and floating rate securities may decline if their interest rates do not rise as quickly, or as much, as market interest rates. Conversely, floating rate securities will not generally increase in value if interest rates decline. During periods of extremely low short-term interest rates, the fund may not be able to maintain a positive yield or total return and, in relatively low interest rate environments, there are heightened risks associated with rising interest rates.

Exposure to country, region, industry or sector – Subject to the fund's investment limitations, the fund may have significant exposure to a particular country, region, industry or sector. Such exposure may cause the fund to be more impacted by risks relating to and developments affecting the country, region, industry or sector, and thus its net asset value may be more volatile, than a fund without such levels of exposure. For example, if the fund has significant exposure in a particular country, then social, economic, regulatory or other issues that negatively affect that country may have a greater impact on the fund than on a fund that is more geographically diversified.

Market trading – The fund shares are listed for trading on an exchange and are bought and sold on the secondary market at market prices. The market prices of fund shares are expected to fluctuate, in some cases materially, in response to changes in the fund's net asset value ("NAV"), the intraday value of the fund's holdings, and supply and demand for the fund shares. The existence of significant market volatility, disruptions to creations and redemptions, or potential lack of an active trading market for fund shares and/or for the holdings of the fund (including through a trading halt), among other factors, may result in the shares trading significantly above (at a premium) or below (at a discount) to NAV and bid-ask spreads may widen. A bid-ask spread is the "spread" or difference between what investors are willing to pay for fund shares (the "bid" price) and the price at which they are willing to sell fund shares (the "ask" price). If you buy fund shares when their market price is at a premium or sell the fund shares when their market price is at a discount, you may pay more than, or receive less than, NAV, respectively.

Authorized Participant concentration – Only Authorized Participants (as defined in the “Shareholder information” section below) may engage in creation or redemption transactions directly with the fund, and none of them is obligated to do so. The fund has a limited number of institutions that may act as Authorized Participants. In addition, to the extent that securities held by the fund are traded outside a collateralized settlement system, Authorized Participants may be required to post collateral on certain trades on an agency basis (on behalf of other market participants), which only a limited number of Authorized Participants may be able to do. If Authorized Participants exit the business or are unable to or elect not to engage in creation or redemption transactions, and no other Authorized Participant engages in such function, fund shares may trade at a premium or discount to the fund’s net asset value and/or at wider intraday bid-ask spreads and possibly face trading halts or delisting.

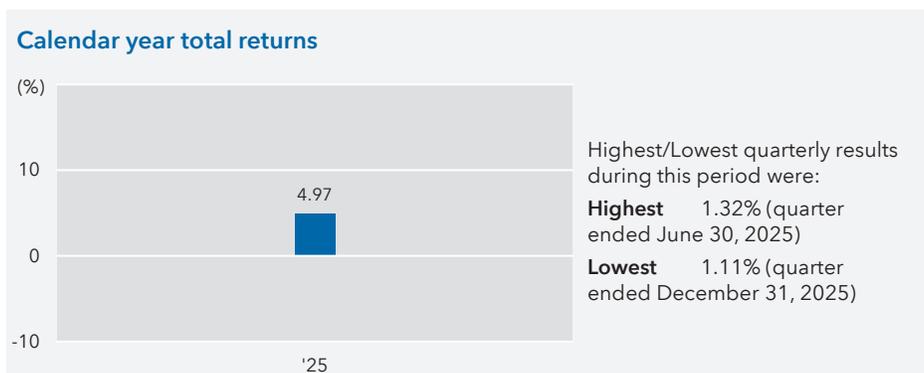

Nondiversification – As a nondiversified fund, the fund may invest a greater percentage of its assets in fewer issuers than a diversified fund. A fund that invests in a relatively smaller number of issuers is more susceptible to risks associated with a single economic, political, geographic or regulatory occurrence than a diversified fund might be. In addition, poor performance by a single issuer could adversely affect fund performance more than if the fund were invested in a larger number of issuers. The value of the fund’s shares can be expected to fluctuate more than might be the case if the fund were more broadly diversified.

Cash transactions – The fund currently expects to effect at least part of its creations and redemptions for cash rather than in-kind securities. When the fund effects redemptions partly or wholly for cash, rather than in-kind, the fund may have to sell portfolio securities at inopportune times in order to obtain the cash needed to meet redemption orders. If the fund realizes gains on these sales, the fund generally will be required to recognize a gain it might not otherwise have recognized, or to recognize such gain sooner than would otherwise be required if it were to distribute portfolio securities in-kind. This strategy may cause shareholders to be subject to tax from distributions to which they would not otherwise be subject. The use of cash creations and redemptions may also cause the fund’s shares to trade in the market at wider bid-ask spreads or greater premiums or discounts to the fund’s NAV. As a result of such cash transactions, the fund could incur brokerage costs which, to the extent not offset by transaction fees that are payable by an Authorized Participant, may reduce the fund’s NAV.

Management – The investment adviser to the fund actively manages the fund’s investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows the fund's investment results for its first full calendar year of operations, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and, if applicable, other measures of market results that reflect the fund's investment universe. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/etf.

Average annual total returns For the periods ended December 31, 2025:

	1 year	Lifetime
Fund (inception date – 6/25/24)	4.97%	5.37%
– After taxes on distributions	3.20	3.47
– After taxes on distributions and sale of fund shares	2.92	3.29

Indexes	1 year	Lifetime (since fund's inception)
Bloomberg U.S. Aggregate Index (reflects no deductions for sales charges, account fees, expenses or U.S. federal income taxes)	7.30%	5.59%
ICE BofA 3-Month U.S. Treasury Bill Index (reflects no deductions for sales charges, account fees, expenses or U.S. federal income taxes)	4.18	4.50

After-tax returns are calculated using the highest individual federal income tax rates in effect during each year of the periods shown and do not reflect the impact of state and local taxes. Your actual after-tax returns depend on your individual tax situation and likely will differ from the results shown above.

Management

Investment adviser Capital Research and Management Company

Portfolio managers The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Fund title (if applicable)	Portfolio manager in this fund since:	Primary title with investment adviser
Oliver V. Edmonds	2024	Partner – Capital Fixed Income Investors
Steven D. Lotwin President	2024	Partner – Capital Fixed Income Investors

Purchase and sale of fund shares The fund is an exchange-traded fund (“ETF”). Individual shares of the fund may only be bought and sold in the secondary market through a broker-dealer at market price. Because ETF shares trade at market prices rather than at NAV, shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase fund shares (bid) and the lowest price a seller is willing to accept for fund shares (ask) when buying or selling shares in the secondary market (the “bid-ask spread”). Recent information regarding the fund’s NAV, market price, premiums and discounts, and bid-ask spread is available at capitalgroup.com/etf.

Tax information Dividends and capital gain distributions you receive from the fund are subject to federal income taxes and may also be subject to state and local taxes, unless you are tax-exempt or your account is tax-favored (in which case you may be taxed later, upon withdrawal of your investment from such account).

Payments to broker-dealers and other financial intermediaries If you purchase shares of the fund through a broker-dealer or other financial intermediary (such as a bank), the fund’s distributor or its affiliates may pay the intermediary for the sale of fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your individual financial professional to recommend the fund over another investment. Ask your individual financial professional or visit your financial intermediary’s website for more information.

You can access the fund’s [statutory prospectus](#) or [SAI](#) at capitalgroup.com/prospectus/etf.
