Capital Group Active-Passive

Tax-Aware Conservative Growth and Income Model

Making portfolios personal

Q3 fact sheet

Data as of September 30, 2025, unless otherwise noted.

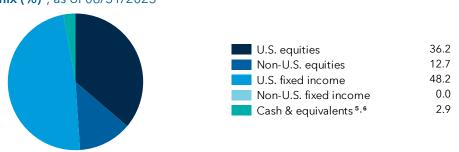

Key information

Objective:

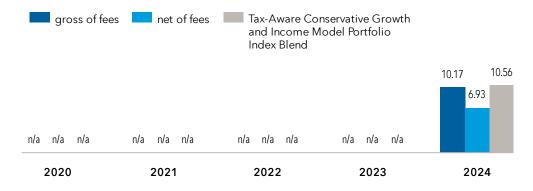

Seeks to provide high current income and secondarily long-term growth of capital, through dividend-paying equities and tax-exempt, fixed-income securities utilizing both active and passive investments.

Asset mix (%) 4 , as of 08/31/2025

Figures shown are past results and are not predictive of results in future periods. Current and future results may be lower or higher than those shown. Investing for short periods makes losses more likely.

Calendar-year total returns (%) 7,8,9

Investment results

Data for periods ended 09/30/2025 (%)	Cumulative total returns ^{7,8,9,10,11}		Average annual total returns ^{7,8,9,11,12}

CCC/Caa & below	0.0
Unrated	6.9

Bond ratings are based on a model portfolio's underlying funds' holdings and investment policies. Bond ratings, which typically range from AAA/Aaa (highest) to D (lowest), are assigned by credit rating agencies such as Standard & Poor's, Moody's and/or Fitch, as an indication of an issuer's creditworthiness. For most American Funds and Capital Group ETFs, if agency ratings differ, a security will be considered to have received the highest of those ratings; and securities in the Unrated category have not been rated by any of the rating agencies referenced above; however, the investment adviser performs its own credit analysis and assigns comparable ratings that are used for compliance with applicable investment policies. Please see each fund's most recent prospectus for details.

Model portfolios are subject to the risks associated with the underlying funds in the model portfolio. Investors should carefully consider investment objectives, risks, fees and expenses of the funds in the model portfolio, which are contained in the fund prospectuses.

Investments in mortgage-related securities involve additional risks, such as prepayment risk.

The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds.

Lower rated bonds are subject to greater fluctuations in value and risk of loss of income and principal than higher rated bonds.

The return of principal for bond portfolios and for portfolios with significant underlying bond holdings is not guaranteed. Investments are subject to the same interest rate, inflation and credit risks associated with the underlying bond holdings.

Investing outside the United States involves risks, such as currency fluctuations, periods of illiquidity and price volatility. These risks may be heightened in connection with investments in developing countries.

Nondiversified funds have the ability to invest a larger percentage of assets in the securities of a smaller number of issuers than a diversified fund. As a result, poor results by a single issuer could adversely affect fund results more than if the fund invested in a larger number of issuers. See the applicable prospectus for details.

Smaller company stocks entail additional risks, and they can fluctuate in price more than larger company stocks.

There have been periods when the results lagged the index(es) and/or average(s). The indexes are unmanaged and, therefore, have no expenses. Investors cannot invest directly in an index. Index/Index blends for Capital Group/American Funds Model Portfolios are those that the Portfolio Solutions Committee believes most closely approximate the investment universe of a given model portfolio. The index/index blends do not specifically represent the benchmarks of the underlying funds in the Capital Group/American Funds Model Portfolios.

Portfolios are managed, so holdings will change. Certain fixed income and/or cash and equivalents holdings may be held through mutual funds managed by the investment adviser or its affiliates that are not offered to the public.

Totals may not reconcile due to rounding.

Investment results assume all distributions are reinvested and reflect applicable fees and expenses.

Results and results-based figures shown are preliminary and subject to change.

- 1. Data based on the target allocations of the underlying funds.
- 2. Expense ratio for the model is the weighted average of the underlying exchange-traded funds' gross expense ratios as of their most recent prospectuses. Expense ratios do not reflect any advisory fee charged by model providers.
- 3. Data based on the actual allocations of the underlying funds in the representative account of the composite.
- 4. For Capital Group Active-Passive Models, data based on the actual allocations of the underlying funds.
- 5. Accrued income and the timing of its settlement, as well as classification of convertible bonds as debt or equity, can cause slight variations in the balances displayed in different portfolio composition breakdowns.
- 6. Includes cash, short-term securities, other assets less liabilities, accruals, derivatives and forwards. It may also include investments in money market or similar funds managed by the investment adviser or its affiliates that are not offered to the public.
- 7. Composite gross results are net of underlying fund fees and expenses of all of the accounts in the composite and gross of any advisory fees charged by model providers. Results would have been lower if such fees had been deducted.
- 8. Returns are in USD, are asset weighted, and reflect the reinvestment of dividends, interest and other earnings (net of withholding taxes).
- 9. For model portfolios, composite net results are calculated by subtracting an annual 3% fee, (which is equal to or higher than the highest actual model portfolio wrap fee charged by a program sponsor) from the gross composite monthly returns, which are net of underlying fund fees and expenses of all of the accounts in the composite.
- 10. YTD (year-to-date return): For the period from January 1 of the current year to the date shown or from inception date if first offered after January 1 of the current year.
- 11. When applicable, returns for less than one year are not annualized, but calculated as cumulative total returns.
- 12. Index lifetime is based on the Model Portfolio Composite inception date.
- 13. For models, risk measures are based on the composite. Risk measures net of fees are based on net results which are calculated using an annual fee equivalent to 3% deducted from the gross results, which do not reflect the deduction of fees and expenses.

Advisory services offered through Capital Research and Management Company (CRMC) and its RIA affiliates.

Model portfolios are provided to financial intermediaries who may or may not recommend them to clients. The portfolios consist of an allocation of funds for investors to consider and are not intended to be investment recommendations. The portfolios are asset allocations designed for individuals with different time horizons, investment objectives, and risk profiles. Allocations may change and may not achieve investment objectives. If a cash allocation is not reflected in a model, the intermediary may choose to add one. Capital Group does not have investment discretion or authority over investment allocations in client accounts. Rebalancing approaches may differ depending on where the account is held. Investors should talk to their financial professional for information on other investment alternatives that may be available. In making investment decisions, investors should consider their other assets, income, and investments. Visit capitalgroup.com for current allocations.

This content, developed by Capital Group, home of American Funds, should not be used as a primary basis for investment decisions and is not intended to serve as impartial investment or fiduciary advice.
