#### 1. Organization

American Funds Insurance Series (the "series") is registered under the Investment Company Act of 1940, as amended (the "1940 Act"), as an open-end management investment company with 42 different funds (the "funds"), including five funds in the series covered in this report. The series consists of 41 diversified funds and one nondiversified fund: U.S. Small and Mid Cap Equity Fund. The other 37 funds in the series are covered in separate reports. Twenty-four funds in the series are covered in the American Funds Insurance Series report and 13 funds in the series are covered in the American Funds Insurance Series – Target Date Series report. The assets of each fund are segregated, with each fund accounted for separately. Capital Research and

Management Company ("CRMC") is the series' investment adviser. Milliman Financial Risk Management LLC ("Milliman FRM") is the subadviser for the risk management strategy for eight of the funds (the "managed risk funds"), three of which are covered in this report.

The managed risk funds covered in this report are Managed Risk Growth Portfolio, Managed Risk Growth and Income Portfolio and Managed Risk Global Allocation Portfolio. The managed risk funds invest in other funds within the series (the "underlying funds") and employ Milliman FRM to implement the risk management strategy, which consists of using hedging instruments – primarily exchange-traded options and futures contracts – to attempt to stabilize the volatility of the funds around target volatility levels and reduce the downside exposure of the funds during periods of significant market declines.

Shareholders approved a proposal to reorganize the series from a Massachusetts business trust to a Delaware statutory trust. The series reserved the right to delay implementing the reorganization and has elected to do so.

The investment objective(s) for each fund in the American Funds Insurance Series - Portfolio Series are as follows:

**Global Growth Portfolio** – Seeks to provide long-term growth of capital.

**Growth and Income Portfolio** – Seeks to provide long-term growth of capital while providing current income.

**Managed Risk Growth Portfolio** – Seeks to provide long-term growth of capital while seeking to manage volatility and provide downside protection.

**Managed Risk Growth and Income Portfolio** – Seeks to provide long-term growth of capital and current income while seeking to manage volatility and provide downside protection.

Managed Risk Global Allocation Portfolio – Seeks to provide high total return (including income and capital gains) consistent with preservation of capital over the long term while seeking to manage volatility and provide downside protection.

Each fund offers one share class (Class 4 for Global Growth Portfolio and Growth and Income Portfolio, and Class P2 for the three managed risk funds). Share classes have different fees and expenses ("class-specific fees and expenses"), primarily due to different arrangements for certain distribution expenses. Differences in class-specific fees and expenses will result in differences in net investment income and, therefore, the payment of different per-share dividends by each class of each fund.

#### 2. Significant accounting policies

Each fund is an investment company that applies the accounting and reporting guidance issued in Topic 946 by the U.S. Financial Accounting Standards Board ("FASB"). Each fund's financial statements have been prepared to comply with U.S. generally accepted accounting principles ("U.S. GAAP"). These principles require the series' investment adviser to make estimates and assumptions that affect reported amounts and disclosures. Actual results could differ from those estimates. Subsequent events, if any, have been evaluated through the date of issuance in the preparation of the financial statements. The funds follow the significant accounting policies described in this section, as well as the valuation policies described in the next section on valuation.

Operating segments – Each fund represents a single operating segment as the operating results of each fund are monitored as a whole and its long-term asset allocation is determined in accordance with the terms of its prospectus, based on defined investment objectives that are executed by the fund's portfolio management team. A senior executive team comprised of the funds' Principal Executive Officer and Principal Financial Officer, serves as the funds' chief operating decision maker ("CODM"), who act in accordance with Board of Trustee reviews and approvals. The CODM uses financial information, such as changes in net assets from operations, changes in net assets from fund share transactions, and income and expense ratios, consistent with that presented within the accompanying financial statements and financial highlights to assess each fund's profits and losses and to make resource allocation decisions. Segment assets are reflected in the statement of assets and liabilities as net assets, which consists primarily of investment securities, at value, and significant segment expenses are listed in the accompanying statement of operations.

Security transactions and related investment income – Security transactions are recorded by each fund as of the date the trades are executed with brokers. Realized gains and losses from security transactions are determined based on the specific identified cost of the securities. In the event a security is purchased with a delayed payment date, each fund will segregate liquid assets sufficient to meet their payment obligations. Dividend income is recognized on the ex-dividend date and interest income is recognized on an accrual basis.

Fees and expenses – The fees and expenses of the underlying funds are not included in the fees and expenses reported for each of the funds; however, they are indirectly reflected in the valuation of each of the underlying funds. These fees are included in the unaudited net effective expense ratios that are provided as additional information in the financial highlights tables.

Distributions paid to shareholders - Income dividends and capital gain distributions paid to shareholders are recorded on each fund's ex-dividend date.

Currency translation – Assets and liabilities, including investment securities, denominated in currencies other than U.S. dollars are translated into U.S. dollars at the exchange rates supplied by one or more pricing vendors on the valuation date. Purchases and sales of investment securities and income and expenses are translated into U.S. dollars at the exchange rates on the dates of such transactions. The effects of changes in exchange rates on investment securities are included with the net realized gain or loss and net unrealized appreciation or depreciation on investments in each fund's statement of operations. The realized gain or loss and unrealized appreciation or depreciation resulting from all other transactions denominated in currencies other than U.S. dollars are disclosed separately.

New accounting pronouncements - In December 2023, the FASB issued Accounting Standards Update 2023-09 ("the ASU"), Income Taxes (Topic 740): Improvements to Income Tax Disclosures, which enhances income tax disclosures, including disclosure of income taxes paid disaggregated by jurisdiction. The ASU is effective for annual periods beginning after December 15, 2024, with early adoption permitted. Management is currently evaluating the ASU and its impact to the financial statements.

#### 3. Valuation

Security valuation - The net asset value of each share class of each fund is calculated based on the reported net asset values of the underlying funds in which each fund invests. The net asset value of each underlying fund is calculated based on the policies and procedures of the underlying fund contained in each underlying fund's statement of additional information. The net asset value per share of each fund and each underlying fund is calculated once daily as of the close of regular trading on the New York Stock Exchange, normally 4 p.m. New York time, each day the New York Stock Exchange is open. State Street Institutional U.S. Government Money Market Fund held by the managed risk funds is managed to maintain a \$1.00 net asset value per share. Exchange-traded options and futures are generally valued at the official closing price for options and official settlement price for futures on the exchange or market on which such instruments are traded, as of the close of business on the day such instruments are being valued.

Processes and structure – The series' board of trustees has designated the series' investment adviser to make fair value determinations, subject to board oversight. The investment adviser has established a Joint Fair Valuation Committee (the "Committee") to administer, implement and oversee the fair valuation process, and to make fair value decisions. The Committee regularly reviews its own fair value decisions, as well as decisions made under its standing instructions to the investment adviser's valuation team. The Committee reviews changes in fair value measurements from period to period, pricing vendor information and market data, and may, as deemed appropriate, update the fair valuation guidelines to better reflect the results of back testing and address new or evolving issues. Pricing decisions, processes and controls over security valuation are also subject to additional internal reviews facilitated by the investment

adviser's global risk management group. The Committee reports changes to the fair valuation guidelines to the board of trustees. The series' board and audit committee also regularly review reports that describe fair value determinations and methods.

Classifications – The series' investment adviser classifies each fund's assets and liabilities into three levels based on the method used to value the assets or liabilities. Level 1 values are based on quoted prices in active markets for identical securities. Level 2 values are based on significant observable market inputs, such as quoted prices for similar securities and quoted prices in inactive markets. Level 3 values are based on significant unobservable inputs that reflect the investment adviser's determination of assumptions that market participants might reasonably use in valuing the securities. The valuation levels are not necessarily an indication of the risk or liquidity associated with the underlying investment. As of June 30, 2025, all of the investment securities held by each fund were classified as Level 1.

#### 4. Risk factors

Investing in the funds may involve certain risks including, but not limited to, those described below.

Allocation risk – Investments in each fund are subject to risks related to the investment adviser's allocation choices. The selection of the underlying funds and the allocation of each fund's assets could cause each fund to lose value or its results to lag relevant benchmarks or other funds with similar objectives. Some of the funds may invest in an underlying fixed-income fund that is a non-diversified investment company under the Investment Company Act of 1940. To the extent that any of the funds that invest in the non-diversified investment company invests a larger percentage of its assets in securities of one or more issuers, poor performance by these securities could have a greater adverse impact on that fund's investment results.

Fund structure – Each fund invests in underlying funds and incurs expenses related to the underlying funds. In addition, investors in each fund will incur fees to pay for certain expenses related to the operations of the fund. An investor holding the underlying funds directly and in the same proportions as a fund would incur lower overall expenses but would not receive the benefit of the portfolio management and other services provided by a fund. Additionally, in accordance with an exemption under the Investment Company Act of 1940, as amended, the investment adviser considers only proprietary funds when selecting underlying investment options and allocations. This means that each fund's investment adviser does not, nor does it expect to, consider any unaffiliated funds as underlying investment options for each fund. This strategy could raise certain conflicts of interest when determining the overall asset allocation of each fund or choosing underlying investments for each fund, including the selection of funds that result in greater compensation to the adviser or funds with relatively lower historical investment results. The investment adviser has policies and procedures designed to mitigate material conflicts of interest that may arise in connection with its management of each fund.

**Underlying fund risks** – Because each fund's investments consist of underlying funds, each fund's risks are directly related to the risks of the underlying funds. For this reason, it is important to understand the risks associated with investing both in each fund and the applicable underlying funds.

Market conditions – The prices of, and the income generated by, the securities held by the underlying funds may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries or companies; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; levels of public debt and deficits; changes in inflation rates; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease), bank failures and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the underlying funds invest in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of each fund's investments may be negatively affected by developments in other countries and regions.

**Issuer risks** – The prices of, and the income generated by, securities held by the underlying funds may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in the issuer's financial condition or credit rating, changes in government regulations affecting the issuer or its competitive environment

and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives. An individual security may also be affected by factors relating to the industry or sector of the issuer or the securities markets as a whole, and conversely an industry or sector or the securities markets may be affected by a change in financial condition or other event affecting a single issuer.

Investing in growth-oriented stocks - Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

Investing in income-oriented stocks - The value of an underlying fund's securities and income provided by an underlying fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the underlying fund invests.

Investing outside the U.S. - Securities of issuers domiciled outside the U.S. or with significant operations or revenues outside the U.S., and securities tied economically to countries outside the U.S., may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers are domiciled, operate or generate revenue or to which the securities are tied economically. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls, sanctions, or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the U.S. Investments outside the U.S. may also be subject to different regulatory, legal, accounting, auditing, financial reporting and recordkeeping requirements, and may be more difficult to value, than those in the U.S. In addition, the value of investments outside the U.S. may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the underlying funds, which could impact the liquidity of the funds' portfolios. The risks of investing outside the U.S. may be heightened in connection with investments in emerging markets.

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries tend to have less developed political, economic and legal systems than those in developed countries. Accordingly, the governments of these countries may be less stable and more likely to intervene in the market economy, for example, by imposing capital controls, nationalizing a company or industry, placing restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or imposing punitive taxes that could adversely affect the prices of securities. Information regarding issuers in emerging markets may be limited, incomplete or inaccurate, and such issuers may not be subject to regulatory, accounting, auditing, and financial reporting and recordkeeping standards comparable to those to which issuers in more developed markets are subject. The underlying funds' rights with respect to its investments in emerging markets, if any, will generally be governed by local law, which may make it difficult or impossible for the underlying fund to pursue legal remedies or to obtain and enforce judgments in local courts. In addition, the economies of these countries may be dependent on relatively few industries, may have limited access to capital and may be more susceptible to changes in local and global trade conditions and downturns in the world economy. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, more vulnerable to market manipulation, and more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the underlying fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Investing in small companies – Investing in smaller companies may pose additional risks. For example, it is often more difficult to value or dispose of small company stocks and more difficult to obtain information about smaller companies than about larger companies. Furthermore, smaller companies often have limited product lines, operating histories, markets and/or financial resources, may be dependent on one or a few key persons for management, and can be more susceptible to losses. Moreover, the prices of their stocks may be more volatile than stocks of larger, more established companies, particularly during times of market turmoil.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by an underlying fund may be affected by factors such as the interest rates, maturities and credit quality of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. Also, when interest rates rise, issuers of debt securities that may be prepaid at any time, such as mortgage- or other asset-backed securities, are less likely to refinance existing debt securities, causing the average life of such securities to extend. A general change in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. Changes in actual or perceived creditworthiness may occur quickly. A downgrade or default affecting any of the underlying funds' securities could cause the value of the underlying funds' shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which an underlying fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The underlying funds' investment adviser relies on its own credit analysts to research issuers and issues in assessing credit and default risks.

Investing in lower rated debt instruments - Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

Liquidity risk – Certain underlying fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile or difficult to determine, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the underlying fund may be unable to sell such holdings when necessary to meet its liquidity needs or to try to limit losses, or may be forced to sell at a loss.

Management – The investment adviser to the funds and to the underlying funds actively manages each underlying fund's investments. Consequently, the underlying funds are subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause an underlying fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Investing in the managed risk funds may involve additional risks including, but not limited to, those described below.

Investing in options and futures contracts - In addition to the risks generally associated with investing in derivative instruments, options and futures contracts are subject to the creditworthiness of the clearing organizations, exchanges and, in the case of futures, futures commission merchants with which a fund transacts. While both options and futures contracts are generally liquid instruments, under certain market conditions, options and futures may be deemed to be illiquid. For example, a fund may be temporarily prohibited from closing out its position in an options or futures contract if intraday price change limits or limits on trading volume imposed by the applicable exchange are triggered. If a fund is unable to close out a position on an options or futures contract, the fund would remain subject to the risk of adverse price movements until the fund is able to close out the position in question. The ability of a fund to successfully utilize options and futures contracts may depend in part upon the ability of the fund's investment adviser or subadviser to accurately forecast interest rates and other economic factors and to assess and predict the impact of such economic factors on the options and futures in which the fund invests. If the investment adviser or subadviser incorrectly forecasts economic developments or incorrectly predicts the impact of such developments on the options and futures in which it invests, a fund could suffer losses. Whereas the risk of loss on a put option purchased by the fund is limited to the initial cost of the option, the amount of a potential loss on a futures contract could greatly exceed the relatively small initial amount invested in entering the futures position.

Hedging – There may be imperfect or even negative correlation between the prices of the options and futures contracts in which the fund invests and the prices of the underlying securities or indexes which the fund seeks to hedge. For example, options and futures contracts may not provide an effective hedge because changes in options and futures contract prices may not track those of the underlying securities or indexes they are intended to hedge. In addition, there are significant differences between the securities market, on the one hand, and the options and futures markets, on the other, that could result in an imperfect correlation between the markets, causing a given hedge not to achieve its objectives. The degree of imperfection of correlation depends on circumstances such as variations in speculative market demand for options and futures, including technical influences in options and futures trading, and differences between the financial instruments being hedged and the instruments underlying the standard contracts available for trading. A decision as to whether, when and how to hedge involves the exercise of skill and judgment, and even a well-conceived hedge may be unsuccessful to some degree because of market behavior or unexpected interest rate trends. In addition, a fund's investment in exchange-traded options and futures and their resulting costs could limit the fund's gains in rising markets relative to those of the underlying fund, or to those of unhedged funds in general.

Short positions – A fund may suffer losses from short positions in futures and options contracts. Losses from short positions in futures contracts occur when the underlying index increases in value. As the underlying index increases in value, the holder of the short position in the corresponding futures contract is required to pay the difference in value of the futures contract resulting from the increase in the index on a daily basis. Losses from a short position in an index futures contract could potentially be very large if the value of the underlying index rises dramatically in a short period of time.

Investing in mortgage-related and other asset-backed securities – Mortgage-related securities, such as mortgage-backed securities, and other asset-backed securities, include debt obligations that represent interests in pools of mortgages or other income-bearing assets, such as consumer loans or receivables. While such securities are subject to the risks associated with investments in debt instruments generally (for example, credit, extension and interest rate risks), they are also subject to other and different risks. Mortgage-backed and other asset-backed securities are subject to changes in the payment patterns of borrowers of the underlying debt, potentially increasing the volatility of the securities and an underlying fund's net asset value. When interest rates fall, borrowers are more likely to refinance or prepay their debt before its stated maturity. This may result in an underlying fund having to reinvest the proceeds in lower yielding securities, effectively reducing the underlying fund's income. Conversely, if interest rates rise and borrowers repay their debt more slowly than expected, the time in which the mortgage-backed and other asset-backed securities are paid off could be extended, reducing the underlying fund's cash available for reinvestment in higher yielding securities. Mortgage-backed securities are also subject to the risk that underlying borrowers will be unable to meet their obligations and the value of property that secures the mortgages may decline in value and be insufficient, upon foreclosure, to repay the associated loans. Investments in asset-backed securities are subject to similar risks.

Investing in future delivery contracts – The underlying funds may enter into contracts, such as to-be-announced contracts and mortgage dollar rolls, that involve the underlying fund selling mortgage-related securities and simultaneously contracting to repurchase similar securities for delivery at a future date at a predetermined price. This can increase the underlying fund's market exposure, and the market price of the securities that the underlying fund contracts to repurchase could drop below their purchase price. While the underlying fund can preserve and generate capital through the use of such contracts by, for example, realizing the difference between the sale price and the future purchase price, the income generated by the underlying fund may be reduced by engaging in such transactions. In addition, these transactions increase the turnover rate of the underlying fund.

Investing in securities backed by the U.S. government – U.S. government securities are subject to market risk, interest rate risk and credit risk. Securities backed by the U.S. Treasury or the full faith and credit of the U.S. government are guaranteed only as to the timely payment of interest and principal when held to maturity. Accordingly, the current market values for these securities will fluctuate with changes in interest rates and the credit rating of the U.S. government. Notwithstanding that these securities are backed by the full faith and credit of the U.S. government, circumstances could arise that would prevent or delay the payment of interest or principal on these securities, which could adversely affect their value and cause each fund to suffer losses. Such an event could lead to significant disruptions in U.S. and global markets. Securities issued by U.S. government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government are neither issued nor guaranteed by the U.S. government.

Asset allocation – A certain fund's percentage allocation to equity securities, debt securities and money market instruments (through its investments in the underlying funds) could cause the fund to underperform relative to relevant benchmarks and other funds with similar investment objectives.

Currency – The prices of, and the income generated by, many debt securities held by the underlying funds may also be affected by changes in relative currency values. If the U.S. dollar appreciates against foreign currencies, the value in U.S. dollars of an underlying fund's securities denominated in such currencies would generally fall and vice versa.

Management – The managed risk funds are subject to the risk that the managed risk strategy or the methods employed by the subadviser in implementing the managed risk strategy may not produce the desired results. The occurrence of either or both of these events could cause an underlying fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

#### 5. Certain investment techniques

Options contracts - The managed risk funds have entered into options contracts, which give the purchaser of the option, in return for a premium payment, the right to buy from (in the case of a call) or sell to (in the case of a put) the writer of the option the reference instrument underlying the option (or the cash value of the instrument or index underlying the option) at a specified exercise price. The writer of an option has the obligation, upon exercise of the option, to cash settle or deliver the underlying instrument or index upon payment of the exercise price (in the case of a call) or to cash settle or take delivery of the underlying instrument or index and pay the exercise price (in the case of a put).

By purchasing a put option, the fund obtains the right (but not the obligation) to sell the instrument underlying the option (or to deliver the cash value of the instrument or index underlying the option) at a specified exercise price. In return for this right, the fund pays the current market price, or the option premium, for the option. The fund may terminate its position in a put option by allowing the option to expire or by exercising the option. If the option is allowed to expire, the fund will lose the entire amount of the premium paid. If the option is exercised, the fund completes the sale of the underlying instrument (or delivers the cash value of the index underlying the option) at the exercise price. The fund may also terminate a put option position by entering into opposing close-out transactions in advance of the option expiration date.

The features of call options are essentially the same as those of put options, except that the purchaser of a call option obtains the right (but not the obligation) to purchase, rather than sell, the underlying instrument (or the cash value of the index underlying the option) at the specified exercise price. The buyer of a call option typically attempts to participate in potential price increases of the underlying instrument or index with risk limited to the cost of the option if the price of the underlying instrument or index falls. At the same time, the call option buyer can expect to suffer a loss if the price of the underlying instrument or index does not rise sufficiently to offset the cost of the option.

The writer of a put or call option takes the opposite side of the transaction from the option purchaser. In return for receipt of the option premium, the writer assumes the obligation to pay or receive the exercise price for the option's underlying instrument or index if the other party to the option chooses to exercise it. The writer may seek to terminate a position in a put option before exercise by entering into opposing close-out transactions in advance of the option expiration date. If the market for the relevant put option is not liquid, however, the writer must be prepared to pay the exercise price while the option is outstanding, regardless of price changes. Writing a call option obligates the writer to, upon exercise of the option, deliver the option's underlying instrument in return for the exercise price or to make a net cash settlement payment, as applicable. The characteristics of writing call options are similar to those of writing put options, except that writing call options is generally a profitable strategy if prices remain the same or fall. The potential gain for the option seller in such a transaction would be capped at the premium received.

Option contracts can be either equity style (premium is paid in full when the option is opened) or futures style (premium moves as part of variation margin over the life of the option, and is paid in full when the option is closed). For equity style options, premiums paid on options purchased, as well as the daily fluctuation in market value, are included in investment securities from unaffiliated issuers in each fund's statement of asset and liabilities, and premiums received on options written, as well as the daily fluctuation in market value, are included in options written at value in each fund's statement of assets and liabilities. The net realized gains or losses and net unrealized appreciation or depreciation from equity style options are recorded in investments for purchased options and in options written for written options in the fund's statement of operations and statement of changes in net assets.

Option contracts can take different forms. Some of the funds have entered into the following types of options contracts:

Options on equity indexes – As part of their managed risk strategy, the managed risk funds will at times purchase put options on equity indexes in standardized contracts traded on foreign or domestic securities exchanges, boards of trade, or similar entities.

The average month-end notional amount of options contracts while held by Managed Risk Growth Portfolio, Managed Risk Growth and Income Portfolio and Managed Risk Global Allocation Portfolio was \$1,262,641,000, \$1,009,965,000 and \$272,705,000, respectively.

Futures contracts - The managed risk funds have entered into futures contracts, which provide for the future sale by one party and purchase by another party of a specified amount of a specific financial instrument for a specified price, date, time and place designated at the time the contract is made. Futures contracts are used to strategically manage portfolio volatility and downside equity risk.

Upon entering into futures contracts, and to maintain the fund's open positions in futures contracts, the fund is required to deposit with a futures broker, known as a futures commission merchant ("FCM"), in a segregated account in the name of the FCM an amount of cash, U.S. government securities, suitable money market instruments, or other liquid securities, known as initial margin. The margin required for a particular futures contract is set by the exchange on which the contract is traded to serve as collateral, and may be significantly modified from time to time by the exchange during the term of the contract.

On a daily basis, each fund pays or receives variation margin based on the increase or decrease in the value of the futures contracts and records variation margin on futures contracts in the statement of assets and liabilities. Futures contracts may involve a risk of loss in excess of the variation margin shown on each fund's statement of assets and liabilities. Each fund records realized gains or losses at the time the futures contract is closed or expires. Net realized gains or losses and net unrealized appreciation or depreciation from futures contracts are recorded in each fund's statement of operations. The average month-end notional amount of futures contracts while held by Managed Risk Growth Portfolio, Managed Risk Growth and Income Portfolio and Managed Risk Global Allocation Portfolio was \$323,166,000, \$213,810,000 and \$63,409,000, respectively.

The following tables identify the location and fair value amounts on each fund's statement of assets and liabilities and the effect on each fund's statement of operations resulting from the managed risk funds' use of options purchased and futures contracts as of June 30, 2025 (dollars in thousands):

#### Managed Risk Growth Portfolio

			\$(11,904)		\$279	

<sup>\*</sup>Includes options purchased as reported in the fund's investment portfolio.

<sup>†</sup>Includes cumulative appreciation/depreciation on futures contracts as reported in the applicable table following each fund's investment portfolio. Only current day's variation margin is reported within each fund's statement of assets and liabilities.

Collateral – Funds that invest in options and futures contracts participate in a collateral program. The program calls for each fund to pledge highly liquid assets, such as cash or U.S. government securities, as collateral for initial and variation margin by contract. The purpose of the collateral is to cover potential losses that could occur in the event that either party cannot meet its contractual obligations. Non-cash collateral pledged by the fund, if any, is disclosed in the fund's investment portfolio, and cash collateral pledged by the fund, if any, is held in a segregated account with the fund's custodian, which is reflected as pledged cash collateral in each fund's statement of assets and liabilities.

#### 6. Taxation and distributions

Federal income taxation – Each fund complies with the requirements under Subchapter M of the Internal Revenue Code applicable to regulated investment companies and intends to distribute substantially all of its net taxable income and net capital gains each year. The funds are not subject to income taxes to the extent such distributions are made. Therefore, no federal income tax provision is required.

As of and during the period ended June 30, 2025, none of the funds had a liability for any unrecognized tax benefits. Each fund recognizes interest and penalties, if any, related to unrecognized tax benefits as income tax expense in their respective statements of operations. During the period, none of the funds incurred any significant interest or penalties.

Each fund's tax returns are generally not subject to examination by federal, state and, if applicable, non-U.S. tax authorities after the expiration of each jurisdiction's statute of limitations, which is typically three years after the date of filing but can be extended in certain jurisdictions.

**Distributions** – Distributions determined on a tax basis may differ from net investment income and net realized gains for financial reporting purposes. These differences are due primarily to different treatment for items such as short-term capital gains and losses, net capital losses and capital losses related to sales of certain securities within 30 days of purchase. The fiscal year in which amounts are distributed may differ from the year in which the net investment income and net realized gains are recorded by the funds for financial reporting purposes.

Additional tax basis disclosures for each fund are as follows (dollars in thousands):

	Global Growth Portfolio	Growth and Income Portfolio	Managed Risk Growth Portfolio	Managed Risk Growth and Income Portfolio	Managed Risk Global Allocation Portfolio
As of December 31, 2024:  Undistributed ordinary income  Undistributed long-term capital gains  Capital loss carryforward*  Capital loss carryforward utilized	\$ 707	\$ 7,613	\$ 22,054	\$ 20,742	\$ 5,145
	549	4,013	-	-	-
	-	-	(22,945)	(46,726)	(4,145)
	-	1,448	13,627	22,025	546
As of June 30, 2025: Gross unrealized appreciation on investments Gross unrealized depreciation on investments Net unrealized appreciation (depreciation) on investments	14,160	63,016	228,830	203,172	42,493
	(2,829)	(15,699)	(265,600)	(140,114)	(40,457)
	11,331	47,317	(36,770)	63,058	2,036
Cost of investments	65,805	380,541	1,827,319	1,278,107	357,046

<sup>\*</sup>Each fund's capital loss carryforwards will be used to offset any capital gains realized by the fund in the current year or in subsequent years. Funds with a capital loss carryforward will not make distributions from capital gains while a capital loss carryforward remains.

Distributions paid by each fund were characterized for tax purposes as follows (dollars in thousands):

#### Global Growth Portfolio

	Six r	months ended June	30, 2025	Yea	r ended December 3	31, 2024

#### 7. Fees and transactions

CRMC, the series' investment adviser, is the parent company of Capital Client Group, Inc. ("CCG"), the distributor of the series' shares, and American Funds Service Company® ("AFS"), the series' transfer agent. CRMC, CCG and AFS are considered related parties to the series.

Investment advisory services – The series has an investment advisory and service agreement with CRMC that provides for monthly fees accrued daily. At the beginning of the year, these fees were based on an annual rate of 0.150% of daily net assets for the three managed risk funds. Effective May 1, 2025, the series' board of trustees approved a revised investment advisory and services agreement for the three managed risk funds, reducing the fee for each share class from 0.150% to 0.100%. CRMC receives investment advisory and services fees from the underlying funds. These fees are included in the net effective expense ratios that are provided as additional information in the financial highlights tables. Subadvisory fees for the three managed risk funds are paid by CRMC to Milliman FRM. The three managed risk funds are not responsible for paying any subadvisory fees.

Investment advisory services waivers – For a portion of the period, CRMC waived a portion of the investment advisory and services fees equal to 0.050% of each fund's daily net assets for the three managed risk funds. Effective May 1, 2025, the 0.050% fee waiver was removed for each share class, concurrent with the reduction of the investment advisory and services fee described in "Investment advisory services". For the six months ended June 30, 2025, total investment advisory and services fees waived by CRMC were \$567,000. CRMC does not intend to recoup these waivers. Investment advisory and services fees are presented in each fund's statement of operations gross of the waivers from CRMC.

Class-specific fees and expenses – Expenses that are specific to individual share classes are accrued directly to the respective share class. The principal class-specific fees and expenses are further described below:

Distribution services – The series has plans of distribution for all share classes. Under the plans, the board of trustees approves certain categories of expenses that are used to finance activities primarily intended to sell fund shares. The plans provide for payments to pay service fees to firms that have entered into agreements with the series. These payments, based on an annualized percentage of average daily net assets, range from 0.25% to 0.50% as noted in the table below. In some cases, the board of trustees has limited the amounts that may be paid to less than the maximum allowed by the plans.

Share class	Currently approved limits	Plan limits
Class 4	0.25%	0.25%
Class P2	0.25	0.50

Insurance administrative services – The series has an insurance administrative services plan for all share classes. Under the plan, each share class pays 0.25% of each insurance company's respective average daily net assets to compensate the insurance companies for services provided to their separate accounts and contractholders for which the shares of the fund are beneficially owned as underlying investments of such contractholders' annuities. These services include, but are not limited to, maintenance, shareholder communications and transactional services. The insurance companies are not related parties to the series.

Transfer agent services – The series has a shareholder services agreement with AFS under which the funds compensate AFS for providing transfer agent services to the funds. These services include recordkeeping, shareholder communications and transaction processing. Under this agreement, the managed risk funds also pays sub-transfer agency fees to AFS. These fees are paid by AFS to third parties for performing transfer agent services on behalf of fund shareholders.

Administrative services – The series has an administrative services agreement with CRMC to provide administrative services to all of the funds. Administrative services are provided by CRMC and its affiliates to help assist third parties providing non-distribution services to fund shareholders. These services include providing in-depth information on each fund and market developments that impact fund investments. Administrative services also include, but are not limited to, coordinating, monitoring and overseeing third parties that provide services to fund shareholders. CRMC receives administrative services fee at the annual rate of 0.03% of average daily net assets from the Class 1 shares of the underlying funds for administrative services provided to the series. These fees are included in the net effective expense ratios that are provided as supplementary information in the financial highlights tables.

Accounting and administrative services – The three managed risk funds have a subadministration agreement with Bank of New York Mellon ("BNY Mellon") under which each fund compensates BNY Mellon for providing accounting and administrative services. These services include, but are not limited to, fund accounting (including calculation of net asset value), financial reporting and tax services. BNY Mellon is not a related party to the managed risk funds.

Trustees' deferred compensation – Trustees who are unaffiliated with CRMC may elect to defer the cash payment of part or all of their compensation. These deferred amounts, which remain as liabilities of the funds, are treated as if invested in one or more of the American Funds. These amounts represent general, unsecured liabilities of the funds and vary according to the total returns of the selected funds. Trustees' compensation in each fund's statement of operations reflects current fees (either paid in cash or deferred) and a net increase or decrease in the value of the deferred amounts.

Affiliated officers and trustees - Officers and certain trustees of the series are or may be considered to be affiliated with CRMC, CCG and AFS. No affiliated officers or trustees received any compensation directly from any fund in the series.

#### 8. Indemnifications

The series' organizational documents provide board members and officers with indemnification against certain liabilities or expenses in connection with the performance of their duties to the series. In the normal course of business, the series may also enter into contracts that provide general indemnifications. Each fund's maximum exposure under these arrangements is unknown since it is dependent on future claims that may be made against the series. The risk of material loss from such claims is considered remote. Insurance policies are also available to the series' board members and officers.

#### 9. Capital share transactions

Capital share transactions in each fund were as follows (dollars and shares in thousands):

#### **Global Growth Portfolio**

	Sales		Reinvestments of distributions		Repurchases		Net increase (decrease)

### Approval of Investment Advisory and Service Agreement – American Funds **Insurance Series**

Portfolio Series - American Funds Global Growth Portfolio Portfolio Series - American Funds Growth and Income Portfolio

The series' board has approved the continuation of the series' Investment Advisory and Service Agreement (the "agreement") with Capital Research and Management Company ("CRMC") with respect to Portfolio Series - American Funds Global Growth Portfolio and Portfolio Series - American Funds Growth and Income Portfolio, for an additional one-year term through April 30, 2026. The board approved the agreement following the recommendation of the series' Contracts Committee (the "committee"), which is composed of all the series' independent board members. The board and the committee determined in the exercise of their business judgment that the advisory fee structure for each fund within the series was fair and reasonable in relation to the services provided, and that approving the agreement was in the best interests of each fund and its shareholders.

In reaching this decision, the board and the committee took into account their interactions with CRMC and information furnished to them throughout the year and otherwise provided to them, as well as information prepared specifically in connection with their review of the agreement, and they were advised by their independent counsel with respect to the matters considered. They considered the following factors, among others, but did not identify any single issue or particular piece of information that, in isolation, was the controlling factor, and each board and committee member did not necessarily attribute the same weight to each factor.

#### 1. Nature, extent and quality of services

The board and the committee considered the depth and quality of CRMC's investment management process, including its global research capabilities; the experience, capability and integrity of its senior management and other personnel; the low turnover rates of its key personnel; the overall financial strength and stability of CRMC and the Capital Group organization; the resources and systems CRMC devotes to investment management (the manner in which each fund's assets are managed, including liquidity management), financial, investment operations, compliance, trading, proxy voting, shareholder communications, and other services; and the ongoing evolution of CRMC's organizational structure designed to maintain and strengthen these qualities. The board and the committee also considered the nature, extent and quality of administrative and shareholder services provided by CRMC to the funds under the agreement and other agreements, as well as the benefits to each fund's shareholders from investing in a fund that is part of a large family of funds. The board and the committee considered the risks assumed by CRMC in providing services to the funds, including operational, business, financial, reputational, regulatory and litigation risks. The board and the committee concluded that the nature, extent and quality of the services provided by CRMC have benefited and should continue to benefit each fund and its shareholders.

#### 2. Investment results

The board and the committee considered the investment results of each fund in light of its objectives. They compared each fund's investment results with those of other funds (including funds that currently form the basis of the Lipper index for the category in which each fund is included), and data such as publicly disclosed benchmarks, including applicable market and fund indexes over various periods (including each fund's lifetime) through September 30, 2024. They generally placed greater emphasis on investment results over longer term periods and relative to benchmarks consistent with each fund's objective. On the basis of this evaluation and the board's and the committee's ongoing review of investment results, and considering the relative market conditions during certain reporting periods, the board and the committee concluded that each fund's investment results have been satisfactory for renewal of the agreement, and that CRMC's record in managing the funds indicated that its continued management should benefit each fund and its shareholders.

#### 3. Advisory fees and total expenses

The board and the committee compared the total expense levels of each fund to those of other relevant funds. They observed that each fund's total expenses generally compared favorably to those of other similar funds included in the comparable Lipper category.

The board and the committee also reviewed the fee schedule of the funds (including the fees and total expenses of the underlying funds in which the funds invest) to those of other relevant funds. The board and the committee noted CRMC's prior elimination of the entire advisory fee payable by the funds under the agreement. The board and the committee also considered the breakpoint discounts in each underlying fund's advisory fee structure that reduce the level of fees charged by CRMC to the underlying fund as its assets increase. In addition, they reviewed information regarding the effective advisory fees charged to non-mutual fund clients by CRMC and its affiliates. They noted that, to the extent there were differences between the advisory fees paid by the underlying American Funds and the advisory fees paid by those clients, the differences appropriately reflected the investment, operational, regulatory and market differences between advising the underlying funds and the other clients. The board and the committee concluded that each fund's cost structure was fair and reasonable in relation to the services provided, as well as in relation to the risks assumed by the adviser in sponsoring and managing each fund, and that each fund's shareholders receive reasonable value in return for other amounts paid to CRMC by the funds.

#### 4. Ancillary benefits

The board and the committee considered a variety of other benefits that CRMC and its affiliates receive as a result of CRMC's relationship with the series and the other American Funds, including fees for administrative services provided to certain share classes; fees paid to CRMC's affiliated transfer agent; sales charges and distribution fees received and retained by the series' principal underwriter, an affiliate of CRMC; and possible ancillary benefits to CRMC and its institutional management affiliates in managing other investment vehicles. The board and the committee reviewed CRMC's portfolio trading practices, noting that CRMC bears the cost of third-party research. The board and committee also noted that CRMC benefited from the use of commissions from portfolio transactions made on behalf of each fund to facilitate payments to certain broker-dealers for research to comply with regulatory requirements applicable to these firms, with all such amounts reimbursed by CRMC. The board and the committee took these ancillary benefits into account in evaluating the reasonableness of the other amounts paid to CRMC by the funds.

#### 5. Adviser financial information

The board and the committee reviewed information regarding CRMC's costs of providing services to the American Funds, including personnel, systems and resources of investment, compliance, trading, accounting and other administrative operations. They considered CRMC's costs and related cost allocation methodology, as well as its track record of investing in technology, infrastructure and staff to maintain and expand services and capabilities, respond to industry and regulatory developments, and attract and retain qualified personnel. They noted information regarding the compensation structure for CRMC's investment professionals. They reviewed information on the profitability of the investment adviser and its affiliates. The board and the committee also compared CRMC's profitability and compensation data to the reported results and data of a number of large, publicly held investment management companies. The board and the committee noted the competitiveness and cyclicality of both the mutual fund industry and the capital markets, and the importance in that environment of CRMC's long-term profitability for maintaining its independence, company culture and management continuity. They further considered the breakpoint discounts in the underlying funds' advisory fee structure and CRMC's sharing of potential economies of scale, or efficiencies, through breakpoints and other fee reductions and costs voluntarily absorbed. The board and the committee concluded that each fund's expense structure reflected a reasonable sharing of benefits between CRMC and the funds' shareholders.

### Approval of Investment Advisory and Service Agreement and Subadvisory Agreement – American Funds Insurance Series

Portfolio Series - American Funds Managed Risk Growth Portfolio Portfolio Series - American Funds Managed Risk Growth and Income Portfolio Portfolio Series - American Funds Managed Risk Global Allocation Portfolio

The series' board has approved the continuation of the series' Investment Advisory and Service Agreement (the "advisory agreement") with Capital Research and Management Company ("CRMC") with respect to Portfolio Series - American Funds Managed Risk Growth Portfolio, Portfolio Series - American Funds Managed Risk Growth and Income Portfolio, and Portfolio Series - American Funds Managed Risk Global Allocation Portfolio, for an additional one-year term through April 30, 2026. The advisory agreement was amended to permanently reduce the advisory fee for each fund within the series from 15 basis points to 10 basis points. The board has also approved the series' Subadvisory Agreement (the "subadvisory agreement") with CRMC and Milliman Financial Risk Management LLC ("Milliman FRM") with respect to these funds for the same term. The advisory and subadvisory agreements are jointly referred to below as the "agreements." The board approved the agreements following the recommendation of the series' Contracts Committee (the "committee"), which is composed of all the series' independent board members. The board and the committee determined in the exercise of their business judgment that the advisory fee structure for each fund within the series was fair and reasonable in relation to the services provided, and that approving the agreements was in the best interests of each fund and its shareholders.

In reaching this decision, the board and the committee took into account their interactions with CRMC and Milliman FRM and information furnished to them throughout the year and otherwise provided to them, as well as information prepared specifically in connection with their review of the agreements, and they were advised by their independent counsel with respect to the matters considered. They considered the following factors, among others, but did not identify any single issue or particular piece of information that, in isolation, was the controlling factor, and each board and committee member did not necessarily attribute the same weight to each factor.

#### 1. Nature, extent and quality of services

The board and the committee considered the depth and quality of CRMC's investment management process, including its global research capabilities; the experience, capability and integrity of its senior management and other personnel; the low turnover rates of its key personnel; the overall financial strength and stability of CRMC and the Capital Group organization; the resources and systems CRMC devotes to investment management (the manner in which each fund's assets are managed, including liquidity management), financial, investment operations, compliance, trading, proxy voting, shareholder communications, and other services; and the ongoing evolution of CRMC's organizational structure designed to maintain and strengthen these qualities. The board and the committee also considered the nature, extent and quality of the oversight of Milliman FRM's services provided by CRMC, administrative and shareholder services provided by CRMC to the funds under the advisory agreement and other agreements, as well as the benefits to each fund's shareholders from investing in a fund that is part of a large family of funds. The board and the committee considered the risks assumed by CRMC in providing services to the funds, including operational, business, financial, reputational, regulatory and litigation risks. The board and the committee concluded that the nature, extent and quality of the services provided by CRMC have benefited and should continue to benefit each fund and its shareholders.

The board and the committee also considered the depth and quality of Milliman FRM's investment management process, including its experience in applying the Milliman Managed Risk Strategy to other funds in the series and risk management services for other clients; the experience, capability and integrity of its senior management and other personnel; and the services provided to each fund under the subadvisory agreement. The board and the committee concluded that the nature, extent and quality of the services provided by Milliman FRM have benefited and should continue to benefit each fund and its shareholders.

#### 2. Investment results

The board and the committee considered the investment results of each fund in light of its objectives. They compared each fund's investment results with those of other funds (including funds that currently form the basis of the Lipper index for the category in which each fund is included), and data such as publicly disclosed benchmarks, including applicable market and fund indexes over various periods (including each fund's lifetime) through September 30, 2024. They generally placed greater emphasis on investment results over longer term periods and relative to benchmarks consistent with each fund's objective. The board and the committee also considered the volatility of the funds compared with the S&P 500 Managed Risk indexes and those of asset allocation and balanced funds with volatility management analytics over various periods (including each fund's lifetime) through September 30, 2024. On the basis of this evaluation and the board's and the committee's ongoing review of investment results, and considering the relative market conditions during certain reporting periods, the board and the committee concluded that each fund's investment results and the results of the services provided by CRMC and Milliman FRM have been satisfactory for renewal of the agreements, and that CRMC's and Milliman FRM's record in managing the funds indicated that their continued management should benefit each fund and its shareholders.

#### 3. Advisory fees and total expenses

The board and the committee compared the advisory fees and total expense levels of each fund to those of other relevant funds. The board and the committee noted that CRMC had agreed to eliminate its waiver of 5 basis points of the advisory fee for each of the funds and to permanently reduce the advisory fee of the funds from 15 basis points to 10 basis points, and that CRMC agreed to continue to pay the fees due to Milliman FRM under the subadvisory agreement. They observed that each fund's advisory fees and expenses were generally competitive with, and in many cases compared favorably to, those of other similar funds included in the comparable Lipper category.

The board and the committee also considered the breakpoint discounts in each underlying fund's advisory fee structure that reduce the level of fees charged by CRMC to the underlying fund as its assets increase. In addition, they reviewed information regarding the effective advisory fees charged to non-mutual fund clients by CRMC and its affiliates. They noted that, to the extent there were differences between the advisory fees paid by each fund and the advisory fees paid by those clients, the differences appropriately reflected the investment, operational, regulatory and market differences between advising the funds and the other clients. They also reviewed the fees paid to Milliman FRM by other funds which it advised or subadvised. The board and the committee concluded that each fund's cost structure was fair and reasonable in relation to the services that CRMC provided, directly and through Milliman FRM, as well as in relation to the risks assumed by the adviser in sponsoring and managing each fund, and that each fund's shareholders receive reasonable value in return for the advisory fees and other amounts paid to CRMC (and indirectly to Milliman FRM) by the funds.

#### 4. Ancillary benefits

The board and the committee considered a variety of other benefits that CRMC and its affiliates receive as a result of CRMC's relationship with the series and the American Funds, including fees for administrative services provided to certain share classes; fees paid to CRMC's affiliated transfer agent; sales charges and distribution fees received and retained by the series' principal underwriter, an affiliate of CRMC; and possible ancillary benefits to CRMC and its institutional management affiliates in managing other investment vehicles. The board and the committee reviewed CRMC's portfolio trading practices, noting that CRMC bears the cost of third-party research. The board and committee also noted that CRMC benefited from the use of commissions from portfolio transactions made on behalf of each fund to facilitate payments to certain broker-dealers for research to comply with regulatory requirements applicable to these firms, with all such amounts reimbursed by CRMC. The board and the committee also reviewed similar ancillary benefits received by Milliman FRM as a result of its relationship with the series. The board and the committee took these ancillary benefits into account in evaluating the reasonableness of the advisory fees and other amounts paid to CRMC (and indirectly to Milliman FRM) by each fund.

#### 5. Adviser financial information

The board and the committee reviewed information regarding CRMC's costs of providing services to the American Funds, including personnel, systems and resources of investment, compliance, trading, accounting and other administrative operations. They considered CRMC's costs and related cost allocation methodology, as well as its track record of investing in technology, infrastructure and staff to maintain and expand services and capabilities, respond to industry and regulatory developments, and attract and retain qualified personnel. They noted information regarding the compensation structure for CRMC's investment professionals. They reviewed information on the profitability of the investment adviser and its affiliates. The board and the committee also compared CRMC's profitability and compensation data to the reported results and data of a number of large, publicly held investment management companies. The board and the committee noted the competitiveness and cyclicality of both the mutual fund industry and the capital markets, and the importance in that environment of CRMC's long-term profitability for maintaining its independence, company culture and management continuity. They further considered the breakpoint discounts in the funds' advisory fee structure and CRMC's sharing of potential economies of scale, or efficiencies, through breakpoints and other fee reductions and costs voluntarily absorbed. The board and the committee concluded that each fund's advisory fee structure reflected a reasonable sharing of benefits between CRMC and the funds' shareholders.
