Management's discussion of fund performance

The fund's Class T shares gained 24.56% for the year ended October 31, 2024. That result compares with a 16.54% gain for the S&P Target Date Retirement Income Index.

What factors influenced results

Equity markets climbed as the U.S. economy appeared to avoid a downturn and inflation eased. U.S. equities led, though international stocks also posted strong gains. U.S. bond markets rallied as the U.S. Federal Reserve cut interest rates in September for the first time since 2020.

Significant exposure to equity-income funds helped on an absolute basis. High-income bond funds were strong absolute fixed-income contributors, given robust gains for high-yield bonds.

Global exposure among balanced funds contributed less than the U.S. as international equities lagged. In fixed income, inflation-linked bond exposure contributed less than in other areas of fixed income as inflation cooled.
