**What factors influenced results**

Emerging markets bonds posted strong gains, supported by U.S. rate cuts and a weaker dollar. European yields climbed amid a global sell-off toward the end of the year, which was sparked by rising Japanese yields. The euro, British pound and Mexican peso strengthened, while the Argentine peso and Indian rupee declined.

Sector allocation and security selection contributed to relative results. Country/market allocation decisions added to relative returns, driven primarily by duration management. From a country perspective, off-benchmark positions in Brazilian government bonds benefitted results. Currency positioning contributed to comparative results, supported by gains from unhedged currency exposure.

At the broad level, the impact of currency hedging weighed on relative returns over the period. Underweight positions in Japanese and Chinese government bonds, as well as select non-benchmark positions, detracted from results. Finally, underweight positions in uniform mortgage-backed securities and U.S. Treasuries, which outperformed over the period, were a detriment to results.

**How a hypothetical \$10,000 investment has grown**

Figures assume reinvestment of dividends and capital gains.
