

A woman with blonde hair, wearing a red jacket and a dark vest, is seen from the chest up, steering a sailboat. She is looking forward with a focused expression. The boat's white steering wheel is prominent in the foreground. The background shows a body of water and a cloudy sky at dusk or dawn. The image is framed by a thick blue border.

Navigate markets with confidence

We're committed to helping investors ...

Integrated research

Research is the backbone of our business and is essential to delivering superior results for our investors over the long term.

Collaboration and communication

Our global team of **247** fixed income investment professionals includes **40** portfolio managers who average **25** years of investment industry experience.

Portfolio construction

By combining our top-down global outlook with extensive bottom-up security analysis and risk management, the **Portfolio Strategy Group** provides valuable insights into economic and market developments that help our portfolio managers anticipate major inflection points.

Review and risk monitoring

Risk management is integrated into every step of our investment process. Our dedicated **Risk and Quantitative Solutions Group** provides analytics and understanding of positioning and risks in a portfolio while the **Principal Investment Officer** monitors total risk factors.

Investment industry experience as of 6/30/25.

... stay on course

Strategic advantages

Low cost

All of our fixed income mutual funds offer lower-than-average expense ratios versus their industry peers.*

Commitment

One hundred percent of portfolio managers invest more than \$100,000 in the fixed income retail mutual fund they oversee, with more than half of those funds having at least one manager investing more than \$1,000,000 in their fund.†

Stewardship

We received a "High" Parent rating from Morningstar, reflecting an investment culture marked by lengthy tenures and strong manager fund ownership that we believe promotes superior long-term results.‡

Sources: Capital Group, Morningstar.

*Based on the data for Class F-2 shares as of 12/31/24. Eighteen out of 18 American Funds fixed income funds had expense ratios below the average for their respective Morningstar categories, based on institutional load funds, excluding funds of funds.

†As of 12/31/24. Manager ownership excludes state-specific municipal funds.

‡Morningstar, As of July 16, 2025. Capital Group received a Parent rating of High. Out of 170 firms analyzed, 6.5% also received the same rating as of that date. **Morningstar Pillar Ratings:** Morningstar assigns scores to the People, Process, and Parent Pillars on a -2 to +2 basis. Those scores respond to the pillar ratings assigned to a vehicle based either on an analyst's qualitative assessment or using algorithmic techniques (as explained in further detail in the "Pillar Evaluation" section of Morningstar Medalist Rating Methodology). The pillar ratings take the form of Low, Below Average, Average, Above Average, and High. The Morningstar Pillar Rating should not be used as the sole basis in evaluating a managed investment. Morningstar Pillar Ratings involve unknown risks and uncertainties which may cause Morningstar's expectations not to occur or outcomes to differ significantly from what we expected. The Parent Pillar represents Morningstar's assessment of the stewardship quality of a firm. The model considers data points such as manager retention, fees, and the firm's historical performance. The People Pillar represents Morningstar's assessment of management's talent, tenure, and resources. The model considers data points such as the number of months since a management change and manager excess return. Capital Group did not compensate Morningstar for the ratings and comments contained in this material. However, the firm has paid Morningstar a licensing fee to access and publish its ratings data. For more detailed information about these ratings, including its methodology, please visit global.morningstar.com/managerdisclosures/.

Figures shown are past results and are not predictive of results in future periods. Returns for mutual funds are based on Class F-2 shares. Current and future results may be lower or higher than those shown. Prices and returns will vary, so investors may lose money. Investing for short periods makes losses more likely. Market price returns for the ETFs are determined using the official closing price of the fund's shares and do not represent the returns you would receive if you traded shares at other times. For current information and month-end results, refer to capitalgroup.com.

Turning short-term headwinds ...

Fixed income volatility is often driven by seismic shifts in macroeconomics and other markets

In a world of ever-present risks and unpredictable markets, relying on a static basket of unmanaged bonds may not result in the best possible outcomes. But as markets shift, research can unearth opportunities.

The four key roles in pursuit of ...

Navigate the complexities of the vast global fixed income universe

Depending on an investor's needs and risk appetite, fixed income can pursue a variety of outcomes. In moments of uncertainty, it is important to stop and reflect on the basic role of fixed income in a portfolio.

Focus on the fundamental benefits of fixed income

Fixed income in a target date glide path: an example of evolving needs of the four roles

Percentage of fund allocation

Source: Capital Group. Target allocations as of June 30, 2025, and are subject to the oversight committee's discretion. The investment adviser anticipates assets will be invested within a range that deviates no more than 10% above or below the allocations shown in the prospectus. Underlying funds may be added or removed during the year. For current allocations to the underlying funds, visit capitalgroup.com.

*Macro risks refer to events that can occur within a country that impact the financial markets, such as political events or changes.

... successful outcomes through all markets

Now may be the time to assess your fixed income position

Finding opportunities to enhance yield while managing the growing credit risk is critical for investors.

Examples of how our fixed income funds can serve clients' needs (For a 40% fixed income allocation)

D. Diversification from equities		C. Capital preservation	I. Income	P. Inflation protection

Past results are not predictive of results in future periods.

The portfolio statistics are a weighted average of the funds in the asset allocation approach and are as of 6/30/25. Equity index proxy used is the S&P 500 Index. The asset allocation approach is hypothetical and for illustrative purposes only. We have identified which funds contribute to a particular role of fixed income based on the fund's investment strategies. The extent to which a fund contributes to a specified role depends on the portfolio's composition at any point in time. Allocations, holdings, yields and other data shown do not reflect an actual portfolio. Financial professionals should tailor client recommendations to their individual circumstances.

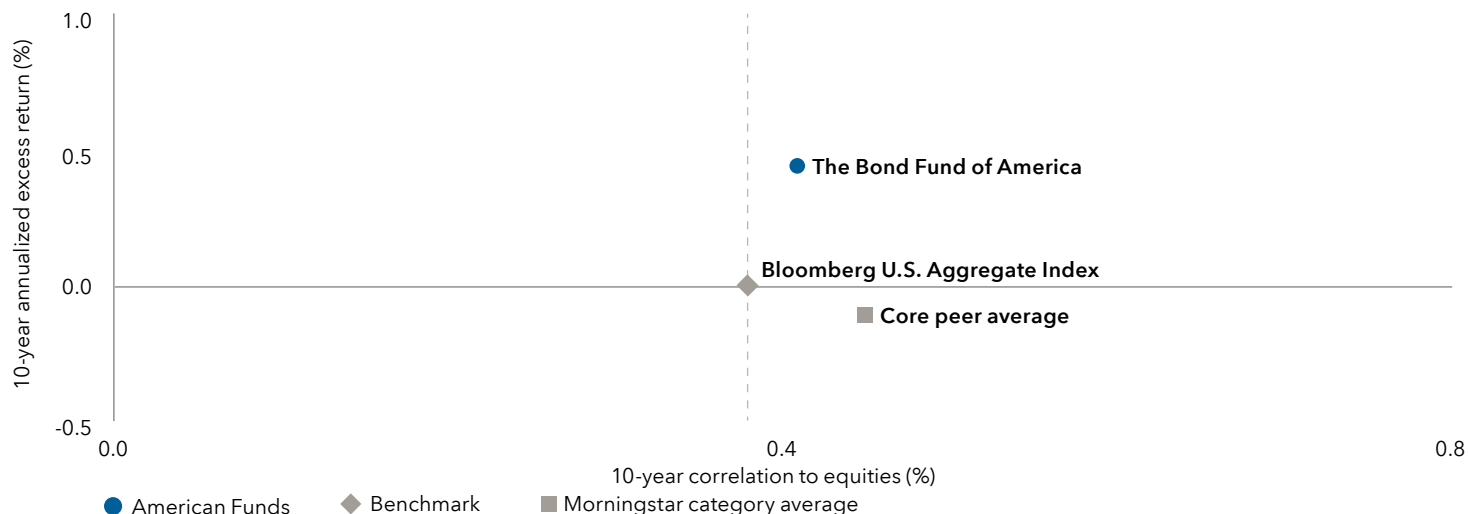

Refer to the glossary on page 18 for more information.

Aim to anchor portfolios with ...

Bond Funds That Behave Like Bond Funds®

Regardless of whether equity markets are volatile, interest rates are rising or credit spreads are widening, what investors expect from bond funds remains the same: alpha, income and stability. A true core bond fund should seek to provide elements of all four roles of fixed income, maintain a quality-oriented portfolio and deliver consistent excess returns versus its benchmark.

Investment results assume all distributions are reinvested and reflect applicable fees and expenses. Class F-2 shares were first offered on August 1, 2008. Class F-2 share results prior to the date of first sale are hypothetical based on the results of the original share class of the fund without a sales charge, adjusted for typical estimated expenses. Results for certain funds with an inception date after August 1, 2008, also include hypothetical returns because those funds' Class F-2 shares sold after the funds' date of first offering. Please refer to capitalgroup.com for more information on specific expense adjustments and the actual dates of first sale.

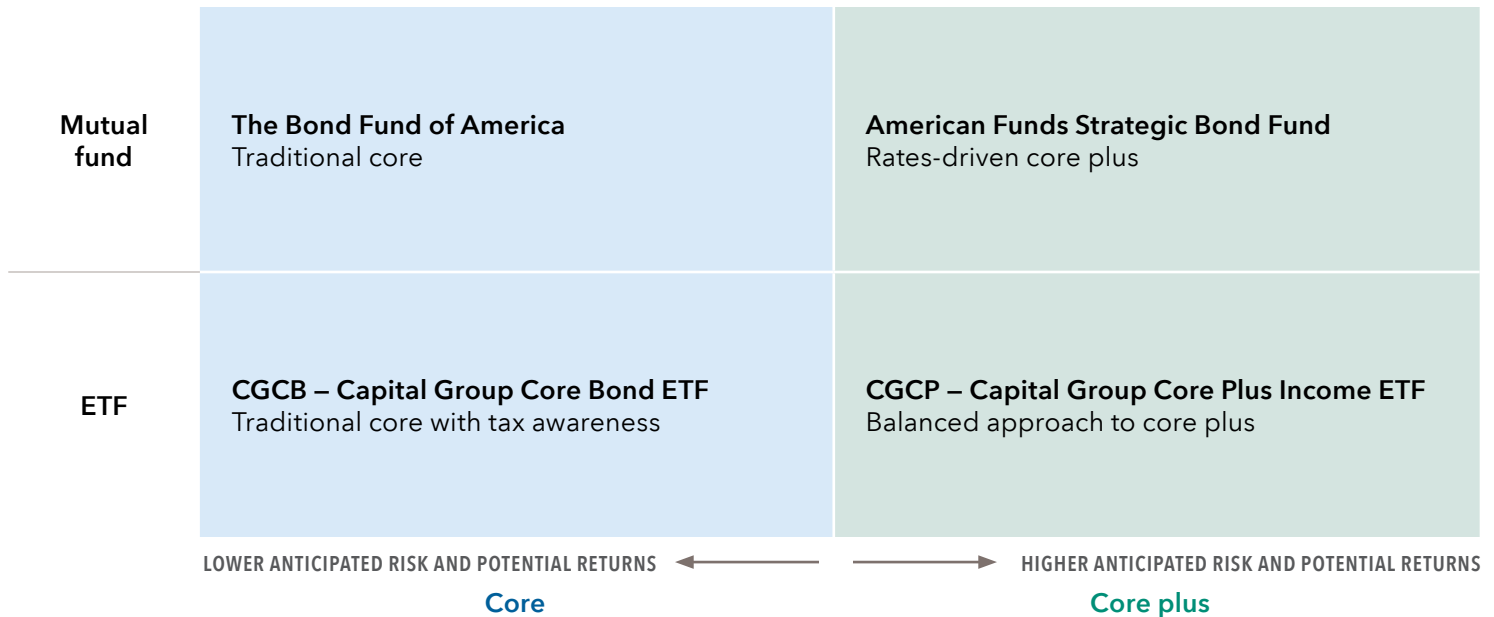

ETF market price returns since inception are calculated using NAV for the period until market price became available (generally a few days after inception).

Keep a more satisfying portion of your income ...

Preserve capital while generating income

While taxes should never be the primary driver of an investment strategy, better tax awareness does have the potential to improve investors' after-tax returns. When reviewing the tax impact on their investments, investors should consider an asset allocation strategy that may help maximize their investments' tax treatment.

*The ticker symbol represents each fund as follows: TEAFX, The Tax-Exempt Bond Fund of America; LTEFX, Limited Term Tax-Exempt Bond Fund of America; ASTFX, American Funds Short-Term Tax-Exempt Bond Fund; AHMFx, American High-Income Municipal Bond Fund; TEFEX, The Tax-Exempt Fund of California; NYAFX, American Funds Tax-Exempt Fund of New York; CGMU, Capital Group Municipal Income ETF; CGSM, Capital Group Short Duration Municipal Income ETF.

[†]Expense ratio for CGHM is estimated.

The pretax yield that a taxable bond would need to be equal to that of a tax-free municipal bond. Tax-equivalent yield = tax-free municipal bond yield / (1 - tax rate). (Based on a federal marginal tax rate of 37%, the top 2025 rate. In addition, we have applied the 3.8% Medicare tax.)

The expense ratios are as of each fund's prospectus available at the time of publication.

Put your money to work and ...

Consider an alternative to cash-like investments

Volatility investors experienced in 2022 and 2023 brought on by rising interest rates, inflation concerns and geopolitical risks served as a reminder of the importance of balancing goals of reaching for higher returns while managing risk. A short-duration approach to fixed income investing may help alleviate concerns of interest rate volatility.

American Funds short-term bond funds have offered relatively attractive yield potential

[Fixed income glossary](#)

[Risk and other key statistics](#)

Correlation

A statistical measure of how a security and an index move in relation to each other. A correlation ranges from -1 to 1. A positive correlation close to 1 implies that as one moved, either up or down, the other moved in "lockstep," in the same direction. A negative correlation close to -1 indicates the two have moved in the opposite direction.

Credit risk

The probability of a borrower defaulting on debt obligations.

Distribution rate (yield)

The distribution rate for all funds except money market funds is based on dividends paid over the last 12 months divided by either the maximum offering price or net asset value price plus any capital gains paid in the last 12 months.

Effective duration

A duration calculation for bonds that takes into account that expected cash flows will fluctuate as interest rates change.

Net high yield

Reflects impact of credit default swap protection, used to hedge systematic market risk and focus exposure on the idiosyncratic risk of high-conviction credits.

SEC yield

Reflects the rate at which the fund is earning income on its current portfolio of securities, while the distribution rate reflects the fund's past dividends paid to shareholders. Accordingly, the fund's SEC yield and distribution rate may differ.

Sharpe ratio

Uses standard deviation and return in excess of the risk-free rate to determine reward per unit of risk. The higher the number, the better the portfolio's historical risk-adjusted performance.

Yield to worst

The lowest yield that can be realized by either calling or putting on one of the available call/put dates, or holding a bond to maturity.

This brochure must be preceded or accompanied by a prospectus or summary prospectus for the funds being offered.

Capital Group exchange-traded funds (ETFs) are actively managed and do not seek to replicate a specific index. ETF shares are bought and sold through an exchange at the then current market price, not net asset value (NAV), and are not individually redeemed from the fund. Shares may trade at a premium or discount to their NAV when traded on an exchange. Brokerage commissions will reduce returns. There can be no guarantee that an active market for ETFs will develop or be maintained, or that the ETF's listing will continue or remain unchanged.

When applicable, results reflect fee waivers and/or expense reimbursements, without which they would have been lower. Please see capitalgroup.com for more information.

Investing outside the United States involves risks, such as currency fluctuations, periods of illiquidity and price volatility. These risks may be heightened in connection with investments in developing countries (also applies to CGCP, CGMS, CGCB, CGSD and CGUI). The return of principal for bond portfolios and for portfolios with significant underlying bond holdings is not guaranteed.

Investments are subject to the same interest rate, inflation and credit risks associated with the underlying bond holdings (also applies to CGCP, CGHM, CGMS, CGSM, CGCB, CGMU, CGSD and CGUI). Investments in mortgage-related securities involve additional risks, such as prepayment risk (also applies to CGCP, CGSD and CGMS). There are ongoing fees and expenses associated with owning bond fund shares, which is in contrast to owning individual bonds. Income may be subject to state or local income taxes and/or the federal alternative minimum tax. Certain other income, as well as capital gain distributions, may be taxable. State tax-exempt bond funds are more susceptible to factors adversely affecting issuers of its state's tax-exempt securities than a more widely diversified municipal bond fund. Income from municipal bonds may be subject to state or local income taxes (also applies to CGHM, CGMU and CGSM). Lower rated bonds are subject to greater fluctuations in value and risk of loss of income and principal than higher rated bonds (also applies to CGCP, CGHM, CGMS, CGSM and CGMU).

Bond ratings, which typically range from AAA/Aaa (highest) to D (lowest), are assigned by credit rating agencies such as Standard & Poor's, Moody's and/or Fitch, as an indication of an issuer's creditworthiness. If agency ratings differ, a security will be considered to have received the highest of those ratings, consistent with applicable investment policies. (For American High-Income Municipal Bond Fund, such securities are placed in the lowest category, consistent with applicable investment policies. For American High-Income Trust, consistent with applicable investment policies, a security will be considered to have received the middle rating. If only two agencies rate a security, the lower rating is used. If only one rates a security, that single rating is used.) (For Capital Group Municipal High-Income ETF, such securities are placed in the lowest category, consistent with applicable investment policies. For Capital Group High Yield Bond ETF, consistent with applicable investment policies, a security will be considered to have received the middle rating. If only two agencies rate a security, the lower rating is used. If only one rates a security, that single rating is used.) Securities in the Unrated category have not been rated by any of the rating agencies referenced above; however, the investment adviser performs its own credit analysis and assigns comparable ratings that are used for compliance with applicable investment policies.

The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional cash securities, such as stocks and bonds (also applies to CGCP, CGMS, CGCB, CGSD and CGUI). While not directly correlated to changes in interest rates, the values of inflation linked bonds generally fluctuate in response to changes in real interest rates and may experience greater losses than other debt securities with similar durations.

Model portfolios are provided to financial intermediaries who may or may not recommend them to clients. The portfolios consist of an allocation of funds for investors to consider and are not intended to be investment recommendations. The portfolios are asset allocations designed for individuals with different time horizons, investment objectives and risk profiles. Allocations may change and may not achieve investment objectives. If a cash allocation is not reflected in a model, the intermediary may choose to add one. Capital Group does not have investment discretion or authority over investment allocations in client accounts. Rebalancing approaches may differ depending on where the account is held. Investors should talk to their financial professional for information on other investment alternatives that may be available. In making investment decisions, investors should consider their other assets, income and investments. Visit capitalgroup.com for current allocations.

As nondiversified funds, CGCB, CGHM, CGMS, CGMU, CGSD, CGSM and CGUI and American Funds Emerging Markets Bond Fund have the ability to invest a larger percentage of assets in the securities of a smaller number of issuers than a diversified fund. As a result, poor results by a single issuer could adversely affect fund results more than if the fund invested in a larger number of issuers. See the applicable prospectus for details.

For American Funds Strategic Bond Fund and CGCP, frequent and active trading of portfolio securities may occur, which may involve correspondingly greater transaction costs, adversely affecting the results.

Interests in Capital Group's U.S. Government Securities portfolios are not guaranteed by the U.S. government.

A portion of Capital World Bond Fund's, American Funds Emerging Markets Bond Fund's and American Funds Strategic Bond Fund's distribution may be classified as a return of capital. Please see each fund's Annual Report for details.

The market indexes are unmanaged and, therefore, have no expenses. Investors cannot invest directly in an index.

This content, developed by Capital Group, home of American Funds, should not be used as a primary basis for investment decisions and is not intended to serve as impartial investment or fiduciary advice.

Bloomberg U.S. Aggregate Index represents the U.S. investment-grade fixed-rate bond market. This index is unmanaged, and its results include reinvested dividends and/or distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes.

Bloomberg U.S. Corporate High Yield 2% Issuer Capped Index covers the universe of fixed-rate, non-investment-grade debt. The index limits the maximum exposure of any one issuer to 2%.

Bloomberg U.S. Corporate Investment Grade Index represents the universe of investment grade, publicly issued U.S. corporate and specified foreign debentures and secured notes that meet the specified maturity, liquidity, and quality requirements.

Bloomberg U.S. Treasury Inflation-Protected Securities (TIPS) Index consists of investment-grade, fixed-rate, publicly placed, dollar-denominated and non-convertible inflation-protected securities issued by the U.S. Treasury that have at least one year remaining to maturity, and have at least \$250 million par amount outstanding.

The J.P. Morgan Emerging Market Bond Index (EMBI) Global Diversified Index is a uniquely weighted emerging market debt benchmark that tracks total returns for U.S. dollar-denominated bonds issued by emerging market sovereign and quasi-sovereign entities.

The MOVE Index measures the implied yield volatility of a basket of one-month over-the-counter options on 2-year, 5-year, 10-year and 30-year Treasuries.

The VIX Index is a calculation designed to produce a measure of constant, 30-day expected volatility of the U.S. stock market, derived from real-time, mid-quote prices of S&P 500® Index (SPXSM) call and put options.

S&P 500 Index is a market capitalization-weighted index based on the results of approximately 500 widely held common stocks.

The Capital System™

Since 1931, Capital Group has helped investors pursue long-term investor success. Our distinctive investment approach – The Capital System – is designed to deliver superior investment results. It rests on three pillars:

Collaborative research

Our portfolio managers, analysts, economists and quantitative research teams closely collaborate on our research process – sharing and debating ideas. This collaboration generates deeper insights that inform our portfolios.

Diverse perspectives

Most portfolios have multiple portfolio managers, each of whom invests part of the portfolio in their strongest individual convictions. Combining these diverse investment approaches into a single portfolio helps us pursue more consistent results, with less volatility.

Long-term view

Investment professionals invest with a long-term view, which we believe aligns our goals with the interests of our clients. Managers are rewarded more for their long-term results,¹ and most personally invest in the funds they manage.² Our fund management fees are among the lowest in the industry.³

A history of strong investment results

Over the past 40 years, **74%** of funds outpaced more than half of their respective peers when comparing average 10-year rolling returns. And **71%** had higher risk-adjusted returns (as indicated by the Sharpe ratio⁴) over that same time frame.⁵

¹ Compensation paid to our investment professionals is heavily influenced by results over one-, three-, five- and eight-year periods, with increasing weight placed on each succeeding measurement period to encourage a long-term investment approach.

² Ninety-seven percent of American Funds® assets are invested in mutual funds in which at least one manager has invested more than \$1 million. Source: Morningstar. Data as of 2/15/25.

³ On average, our mutual fund management fees were in the lowest quintile 49% of the time, based on the 20-year period ended December 31, 2024, versus comparable Lipper categories, excluding funds of funds.

⁴ Sharpe ratio uses standard deviation (a measure of volatility) and return in excess of the risk-free rate to determine reward per unit of risk. The higher the number, the better the portfolio's historical risk-adjusted performance.

⁵ Methodology: Data as of 12/31/24. Based on a comparison of each fund with its respective Morningstar category peers. Data are based on the following mutual fund share classes: Class F-2, Class M, Class 529-A, Class 1, Class P-2 and Class 4. One share class was used per fund. The analysis uses Morningstar hypothetical methodology to calculate hypothetical fund results for periods before a share class's inception. For those periods, Morningstar uses results for the oldest share class (unless the newer share class is more expensive). Source: Capital Group, based on mutual fund data from Morningstar. For each fund, we calculated the average rolling Sharpe ratio and return over the 40-year period (or the fund's lifetime, if it lacks a 40-year history). That average rolling return and Sharpe ratio were compared against the equivalent averages for each fund's respective Morningstar peers on a percentile basis. Rolling returns are calculated monthly.

Investors should carefully consider investment objectives, risks, charges and expenses. This and other important information is contained in the fund prospectuses and summary prospectuses, which can be obtained from a financial professional and should be read carefully before investing.

There have been periods when the funds have lagged their indexes.

Capital Group manages equity assets through three investment groups. These groups make investment and proxy voting decisions independently. Fixed income investment professionals provide fixed income research and investment management across the Capital organization; however, for securities with equity characteristics, they act solely on behalf of one of the three equity investment groups.
