

American Funds Model Portfolios: Designed for the long term

Quarterly update – Q4 2025

CAPITAL
GROUP® | **AMERICAN**
FUNDS®

Key takeaways for the quarter

- Markets closed out 2025 in positive territory, buoyed by robust earnings reports and continued U.S. Federal Reserve rate cuts.
- The American Funds Model Portfolios all had positive absolute gross and net results for the quarter, and while some of them led their benchmarks on a gross basis, all of them lagged net of fees.
- While no model portfolio reallocations were made this quarter, the Portfolio Solutions Committee (PSC) and the Capital Solutions Group (CSG) continue to monitor model portfolios regularly for risks and to ensure alignment with their long-term portfolio objectives, while underlying fund managers use company- and security-specific research to make real-time decisions and identify timely opportunities in today's ever-changing market environment.

Market review

Markets ended 2025 on a positive note, driven largely by solid corporate earnings and continued U.S. Federal Reserve interest rate cuts. U.S. inflation appeared to fall, or at least stabilize, in the fourth quarter but the inflation picture was clouded by missing data due to the government shutdown.

International equities, including emerging markets, outpaced U.S. equities with the MSCI All Country World Index (ACWI) ex USA advancing 5.05%, compared to the S&P 500 Index's 2.66%. Globally, value stocks led growth while defensive stocks generally outpaced more cyclical equities (based on components of the MSCI ACWI). Health care was the highest performing sector in the S&P 500, followed by communication services, with both utilities and real estate ending in negative territory. High-dividend paying stocks lagged the broader U.S. equities market (as evidenced by the sector in the MSCI USA Index). The broad U.S. bond market advanced, boosted by high yield, mortgage-backed securities and municipal bonds (based on results from the Bloomberg U.S. Aggregate, Bloomberg U.S. Corporate High Yield and Bloomberg U.S. Municipal Bond indexes). High-yield outpaced investment-grade credit (as measured by the Bloomberg U.S. Corporate Investment Grade Index). The U.S. Treasury curve steepened over the quarter.

Broad market results

Cumulative returns (%)

■ U.S. equities
(S&P 500 Index)

■ International equities
(MSCI ACWI ex USA Index)

■ U.S. fixed income
(Bloomberg U.S.
Aggregate Index)

Composite net results are calculated by subtracting an annual 3% fee, (which is equal to or higher than the highest actual model portfolio wrap fee charged by a program sponsor) from the gross composite monthly returns, which are net of underlying fund fees and expenses of all accounts in the composite.

Past results are not predictive of results in future periods.

Contribution to returns commentary is based on representative accounts of the model composites and is net of all fees and expenses applicable to the underlying funds and gross of any advisory fee charged by model providers. The net of fees composite results shown illustrate the impact of fees on the portfolio. Attribution for underlying ETFs is based on market price.

The Fed cut interest rates twice in the fourth quarter in response to rising unemployment, bringing the total number of cuts to three in 2025. The Bank of England also lowered their policy rate, while the European Central Bank held theirs steady and the Bank of Japan raised theirs to a 30-year high. As measured by the U.S. Dollar Index, the U.S. dollar rose modestly in the fourth quarter, but still ended down over 9% for the year.

Quarterly model results

All comments about model composite returns are true on a gross and net-of-fees basis, unless otherwise noted. All results are for the quarter unless otherwise specified.

Growth portfolios

American Funds Global Growth Model Portfolio

- Produced positive absolute returns, leading its benchmark on a gross basis, but net returns lagged.
- Strong absolute returns over the year, outpacing its benchmark on a gross basis, while net returns lagged.
- Selection for both U.S. and non-U.S. equities was positive, with U.S. providing a larger contribution to returns.
- Selection in information technology and health care was positive, while selection in communication services, financials and industrials was negative.
- The New Economy Fund® and EUPAC Fund™* were among the stronger absolute returning underlying funds, while The Growth Fund of America® and SMALLCAP World Fund® were the weakest.

*Effective June 1, 2025, EuroPacific Growth Fund is now EUPAC Fund.

American Funds Growth Model Portfolio

- Produced positive absolute returns but lagged its respective benchmark over the quarter and over the year.
- Non-U.S. stock selection was additive, although having less than custom benchmark exposure was a marginal detractor.
- Selection in health care and information technology contributed, while selection in U.S. industrials and communication services sectors was detractive.
- The New Economy Fund was the strongest absolute returning underlying fund, while The Growth Fund of America was the weakest.

American Funds Moderate Growth Model Portfolio

- Produced positive results that were in line with its benchmark on a gross basis, but net returns lagged. Positive selection in non-U.S. equities contributed, while negative U.S. equity stock selection was a detractor.
- Strong absolute returns over the year, aligning with its long-term success metric of total return. It led its benchmark on a gross basis, though net returns lagged.
- Selection in information technology and health care contributed, while selection in industrials and consumer discretionary was detractive.
- Capital World Growth and Income Fund® and Fundamental Investors® were some of the stronger returning underlying funds, while The Growth Fund of America and The Investment Company of America® were the weakest.

Growth-and-income portfolios

American Funds Growth and Income Model Portfolio

- Lagged its benchmark driven by negative U.S. equity security selection. Produced strong absolute returns in line with its benchmark on a gross basis over the year, while net returns lagged.
- Positive fixed income security selection was nullified by negative U.S. equity selection.
- Selection in U.S. industrials and consumer discretionary were the biggest detractors to relative results. Information technology was the largest contributor.
- Within fixed income, positive selection in high yield and emerging market debt helped offset negative selection in securitized debt and inflation-linked bonds.
- Capital World Growth and Income Fund and American Funds Multi-Sector Income Fund were some of the stronger returning underlying equity and fixed income components, while The Growth Fund of America and American Funds Strategic Bond Fund were two of the weakest.

American Funds Moderate Growth and Income Model Portfolio

- Led its benchmark on a gross basis but net returns lagged. U.S. and non-U.S. equity selection were both positive.
- Over the year, positive absolute and relative results were driven by positive fixed income security selection. U.S. and non-U.S. equities also contributed.
- Positive selection in information technology boosted relative results, while selection in the consumer discretionary and communication services sectors was a detractor.
- Within fixed income, selection in corporates was positive, while selection in Treasuries and securitized debt hurt.
- American Balanced Fund®, considered an anchor fund in this particular portfolio, helped provide some ballast to relative weakness from SMALLCAP World Fund and American Funds Strategic Bond Fund.

American Funds Conservative Growth and Income Model Portfolio

- Produced positive returns, driven by positive security selection in fixed income and non-U.S. equities, but lagged its benchmark.
- Within fixed income, positive selection in corporates helped offset negative selection in Treasuries and securitized debt.
- Over the year, favorable security selection in Treasuries and emerging market debt were top contributors to the positive relative results, while U.S. equity selection was a detractor.
- Capital World Growth and Income Fund and American Funds Emerging Market Bond Fund® were some of the stronger underlying components whereas American Mutual Fund® and The Bond Fund of America® were the weakest.

American Funds Conservative Income and Growth Model Portfolio

- Posted positive absolute returns, leading its benchmark on a gross basis, but net returns lagged. Positive fixed income and non-U.S. equity selection offset negative U.S. equity selection.
- Income and lower volatility are important measurements of success to this model so having a structural shift towards dividend-paying equities was a headwind to relative results for the year, but this was offset by strong stock selection in industrials and consumer staples.
- Selection in information technology contributed, while selection in communication services and materials detracted.
- Selection in corporates and emerging market debt were the strongest drivers of fixed income returns. Securitized debt and inflation-linked bonds were detractors.

Preservation and income portfolios

American Funds Conservative Income Model Portfolio

- Produced positive returns, leading its benchmark on a gross basis, but net returns lagged. Security selection in fixed income and non-U.S. equities contributed, while U.S. equity selection was a detractor.
- Over the year, strong returns, driven by positive fixed income security selection, led their benchmark on a gross basis, but net returns lagged.
- Selection in information technology contributed, but selection in industrials and communication services detracted.
- Selection in fixed income was a contributor, particularly within corporates and high yield. Inflation-linked bonds was a detractor.

American Funds Preservation Model Portfolio

- Produced positive results in line with its benchmark on a gross basis, while net returns lagged. Positive selection in securitized debt outweighed negative selection in inflation-linked bonds.
- Over the year, positive returns, driven by fixed income security selection, led their benchmark on a gross basis, but net returns lagged.

Retirement income portfolios

American Funds Retirement Income Model Portfolios all had positive results and led their respective benchmarks on a gross basis, but lagged net of fees, for both the quarter and the year. Positive fixed income and non-U.S. equity security selection drove the annual results.

- Positive equity selection in information technology was weighed down by negative selection in industrials and health care. Dividend equities exposure helped boost returns as higher yielding stocks outpaced. Income-oriented fund Capital Income Builder® has meaningful concentration in dividend payers and was one of the strongest underlying funds with American Funds Multi-Sector Income Fund being one of the weakest.
- Fixed income contributions were positive. Positive selection in corporates and emerging markets contributed, while negative selection in securitized and inflation-linked bonds detracted. American Funds Strategic Bond Fund was one of the weaker returning components in the Moderate and Conservative portfolios.

American Funds Tax-Aware Model Portfolios

- Tax-Aware Moderate Growth Model Portfolio trailed its benchmark, driven by negative selection in U.S. equities, especially within the communication services and industrials sectors.
- Tax-Aware Growth and Income and Tax-Aware Moderate Growth and Income model portfolios trailed their respective benchmarks. Positive selection in fixed income was outweighed by negative selection in U.S. equities.
- Tax-Aware Conservative Growth and Income Model Portfolio was in line with its benchmark on a gross basis, but net returns lagged.
- For all three of the growth-and-income portfolios, the U.S. industrials and communication services sectors were some of the largest detractors for the quarter. For the year, positive absolute results were driven by U.S. equity and fixed income selection. Tax-Aware Conservative Growth and Income Model Portfolio led its benchmark on a gross basis but lagged net of fees. Tax-Aware Growth and Income and Tax-Aware Moderate Growth and Income model portfolios both lagged their benchmarks on an annual basis.
- American Funds Tax-Aware Conservative Income and American Funds Tax-Exempt Preservation model portfolios produced positive absolute returns over the quarter, leading their benchmarks on a gross basis but lagging net of fees. Security selection in municipal fixed income was strong over the quarter and one-year period especially within general obligation and health care revenue bonds.

Looking ahead

As we enter 2026, prospects remain high for relatively stable global economic growth, supported by fiscal stimulus in the U.S. and Europe and the possibility of additional U.S. interest rate cuts. In the U.S., growth has remained solid despite an uptick in the unemployment rate, with strong holiday sales to end the year.

Within underlying funds, equity managers are mindful of historically high valuations across global markets, creating risks of pullbacks in the new year. Markets continue to broaden, with many companies driving returns outside the Magnificent 7 and information technology stocks. Although managers have favored selective information technology companies powering developments in AI, they also are targeting secondary beneficiaries of higher AI spending, including the utilities, industrials and materials companies that are benefiting from the build-out of AI infrastructure. Returns have also broadened geographically as non-U.S. equity markets have seen strong gains after years of mild returns. The German defense stimulus, and increased defense spending in general, are expected

to create opportunities in defense stocks. Corporate reforms in Asia may induce managements there to adopt greater capital efficiency and return more capital to shareholders. In all geographies and sectors, managers will continue to look for companies with attractive valuations, strong business models and quality management.

Within core U.S. fixed income, managers are seeking out select higher-quality opportunities in the credit space as historically high valuations make security selection critical. They also favor certain higher quality, higher coupon parts of the securitized market. Within the municipals market, underlying fund managers are finding compelling opportunities as fundamentals appear strong.

As we kick off the new year, portfolio managers and analysts continue to use their deep fundamental analysis in their quest to unearth overlooked opportunities and pursue strong results for investors.

Model composite results as of December 31, 2025

Past results are not predictive of results in future periods.

Composite net results are calculated by subtracting an annual 3% fee, (which is equal to or higher than the highest actual model portfolio wrap fee charged by a program sponsor) from the gross composite monthly returns, which are net of underlying fund fees and expenses of all accounts in the composite. Composite gross results are net of underlying fund fees and expenses of all accounts in the composite and gross of any advisory fees charged by model providers. Results would have been lower if such fees had been deducted.

The Magnificent Seven stocks consist of Alphabet, Amazon, Apple, Meta, Microsoft, NVIDIA and Tesla.

The index blends are rebalanced monthly. MSCI index results reflect dividends gross of withholding taxes through 12/31/00 and dividends net of withholding taxes thereafter. The indexes are unmanaged, and their results include reinvested dividends and/or distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes. Investors cannot invest directly in an index. There have been periods when the model portfolio has lagged the index/index blend.

Model portfolios are provided to financial intermediaries who may or may not recommend them to clients. The portfolios consist of an allocation of funds for investors to consider and are not intended to be investment recommendations. The portfolios are asset allocations designed for individuals with different time horizons, investment objectives and risk profiles. Allocations may change and may not achieve investment objectives. If a cash allocation is not reflected in a model, the intermediary may choose to add one. Capital Group does not have investment discretion or authority over investment allocations in client accounts. Rebalancing approaches may differ depending on where the account is held. Investors should talk to their financial professional for information on other investment alternatives that may be available. In making investment decisions, investors should consider their other assets, income and investments. Visit capitalgroup.com for current allocations.

Model portfolios are subject to the risks associated with the underlying funds in the model portfolio. Investors should carefully consider investment objectives, risks, fees and expenses of the funds in the model portfolio, which are contained in the fund prospectuses. Investing outside the United States involves risks, such as currency fluctuations, periods of illiquidity and price volatility. These risks may be heightened in connection with investments in developing countries. Smaller company stocks entail additional risks, and they can fluctuate in price more than larger company stocks. The return of principal for bond funds and for funds with significant underlying bond holdings is not guaranteed. Fund shares are subject to the same interest rate, inflation and credit risks associated with the underlying bond holdings. Lower rated bonds are subject to greater fluctuations in value and risk of loss of income and principal than higher rated bonds. Investments in mortgage-related securities involve additional risks, such as prepayment risk. Investments in mortgage-related securities involve additional risks, such as prepayment risk. The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds. A nondiversified fund has the ability to invest a larger percentage of assets in the securities of a smaller number of issuers than a diversified fund. As a result, poor results by a single issuer could adversely affect fund results more than if the fund were invested in a larger number of issuers. See the applicable prospectus for details.
